

**Rajat Khandelwal:**

I have installed Windows and Fedora 18 on my PC. My PC got shutdown three times due to power supply and when I again restarted my PC it gave me an error while loading GRUB - GRUB loading. W...elcome to GRUB! ... Entering rescue mode... error: the symbol 'grub_zalloc' not found grub rescue> Now what should I do? Do I need to install Fedora again?

Like · comment

Ranjan Mondal: Just insert the recovery disk or open Fedora 18 with recovery mode... then try this `# grub2-mkconfig >/etc/grub2.cfg`, then `# grub2-install /dev/sda(your device name)`.

Dipten Halder: You need to re-install the grub boot loader. What Linux distro you are using?

Kanagaraj Govindasamy: Just reinstall your GRUB alone.

**Nikhil Kalra:**

Can someone refer me a good phone, below Rs 12,000 that is good enough to tackle security/malware hazards?

Like · comment

Jeremy Sanders: Ubuntu Phone, Android is based on Java, horribly insecure.

Shankar Shanky: Ubuntu Phone coming Soon.

Rahul Binjve: Lumia 520 is the best phone under 10k. I'm a full time android + Linux user, but gotta admit that there's no competition to Lumia 520.

Er Avishek Kumar: Security relates to software and not Hardware. Nothing is 100% secure. Use any phone having Android with a good Antivirus.

Shashaank Areguli: LG L5 2 is good... as far as the security factor goes, it depends on user.

Bilal Javed: Micromax Canvas 2 looks cool to me.

Akshay Mukadam: I have a problem in installing Fedora 18 CD. As I make the partition, it fails. Please help.

Riya Patankar: Boot with live media, make partitions, and then with DVD just choose the partitions and choose the format option rather than creating them.

Akshay Mukadam: Not working. Before finishing the setup, we made all the swap.boot etc. But the partition fails after clicking it. I tried it with another expert but it failed.
