

What Makes L^AT_EX a Hit?

Continuing from the last article on the subject, let's look at some more ways in which LaTeX can make life easier.

If the previous article motivated you to learn about LaTeX on your own and use it for your work, then what follows will augment your LaTeX skills for most basic tasks. There is enough and more of LaTeX to be learnt from a wealth of resources on the Internet, if you have the liking or need for it.

Hyperlinking

Documents produced today are as much for on-screen viewing as for printing. Hence, hyperlinking within and across documents is almost a hygiene factor for a document. We will use the *hyperref* package for hyperlinking. Now that you are well on your way to becoming a LaTeX pro, let's learn it directly from a template that you can paste into an editor and experiment with. Note that we use the *xcolor* package to differentiate hyperlinks based on colour.

```
%A template to learn hyperlinking.
\documentclass[10pt,a4paper]{article}
\usepackage[pdftex,
colorlinks=true,
urlcolor=Blue,
filecolor=Green,
linkcolor=Red,
pdftitle={Title of Article},
pdfauthor={Author of Article},
pdfsubject={Subject of Article},
pdfkeywords={any, key, words},
pdfproducer={pdfLaTeX},
pdfpagemode=None,
bookmarks=true,
```

```
bookmarksopen=true]{hyperref}
\usepackage[usenames,dvipsnames,
svgnames,table]{xcolor}
%<----- Preamble of Document ----->
%The document title.
\title{\textbf{Title of Article}}
\author{Author1 \ Author2 \ etc.}
\date{} %switches off date. Delete this
%if you want the date to appear.
\begin{document}\label{top}
\maketitle %necessary to create the title.
\tableofcontents
\pagebreak[4] %force pagebreak here.
\section{First Section}\label{first}
%-----Your Content Here----->
Content for the first section.
\subsection{Subsection Title}\label{one-dot-one}
%Content
\subsubsection{Subsubsection Title}
%Content
\section{Second Section}\label{second}
```

This is content for the second section. You can go to \hyperref[first]{Section One} or any other section or location from here, including the \hyperref[top]{top}. Make sure you label the location. Or you can go to page \pageref{first} that has Section One. You can even link to an external PDF \href{test.pdf}{file}.

The following section shows you how to link external URLs:

```
\section{References}
\begin{itemize}
```
