

```
function deviceReady()
{
    var options = new ContactFindOptions(); - (1)
    options.filter="Anupriya"; (2)
    var fields = ["displayName", "name"]; (3)
    navigator.contacts.find(fields, onSuccess, onError,
options); (4)
}

function onSuccess(contacts) {
    for (var i=0; i<contacts.length; i++) {
        console.log("Display Name = " + contacts[i].
displayName); (5)
    }
}
```

- The result of the above code is shown in Figure 6.
- (1) `contactFindOptions()` - This method is used as a search filter when you query the contacts database.
 - (2) The contacts are going to be filtered based on the value provided in `options.filter`.
 - (3) It will find all the contacts wherein the name field value is 'Anupriya'.
 - (4) `Contacts.find()` method will call `onSuccess` or `onError` on success or failure, respectively.
 - (5) The `onSuccess` method will display all the matches found in the `LogCat`.

```
Display Name = Anupriya Sharma
Display Name = Anupriya Sharma at file:///android_asset/www/cont
acts.html:28
Display Name = Anupriya
Display Name = Anupriya at file:///android_asset/www/contacts.ht
ml:28
```

Figure 6: Finding contacts

Note: Here the contacts are displayed only in the console, but they can be shown in list formats according to the need of the application.

So the basics of PhoneGap, along with very simple APIs, have been covered, which can help your hybrid apps to access the simple native features of your devices. There are a lot of APIs still to be explored, which I will cover in the next article. So till then, explore and make the best use of what we have covered here. Suggestions and queries are always welcome. **END**
