

For SMBs, Virtualisation is the Way to Go!

The virtualisation market has gradually matured over the past few years, with most enterprises adopting it today. And now, SMBs too are switching to it, on a large scale.

Virtualisation has become almost mandatory for all companies deploying IT solutions in any way. It simplifies one's IT infrastructure, creating a more dynamic and flexible set-up. As B S Nagarajan, director, System Engineering, VMware India & SAARC, rightly puts it, "Virtualisation makes your IT infrastructure simpler and more efficient. With virtualisation solutions, applications get deployed faster, performance and availability soar, and operations become automated, resulting in IT that's easier and less costly to own and manage."

Needless to say, virtualisation is currently the norm for modern-day IT infrastructure.

Kashish Karnick, brand manager, IBM BladeCenter, India and South Asia, says, "Virtualisation is changing the way people work. It allows customers to consolidate their workloads on to a fewer number of hardware systems. It is possibly one of the most important aspects in today's IT world. It has led to an absolute overhaul of the computing industry. The awareness about virtualisation is growing and people are aware about the advantages it provides."
