

Microland | Bengaluru

Microland's Desktop Virtualisation Business Value Assessment Service provides a holistic approach towards adopting desktop virtualisation adoption. By using this service, enterprises will understand the state of readiness of existing desktop infrastructure, the impact of desktop virtualisation on the organisation, the business case and ROI for a desktop virtualisation initiative, and obtain a high-level design road map for implementation.

MontaVista | Bengaluru

MontaVista offers several virtualisation solutions, including KVM Hypervisor (full virtualisation), Linux Containers (OS resource virtualisation) and MontaVista Bare Metal Engine (OS resource virtualisation and SoC hardware optimisation). The company's virtualisation solutions are certified by Linux Standard Base (LSB) 3.0, Carrier Grade Linux specification (CGL 5.0) and SCOPE Alliance Linux Profile 1.1. An impressive level of six nines (99.9999%) in reliability (a downtime of less than 31.5 sec/year) has also been proven by the company.

Novell India Pvt Ltd | Bengaluru

Novell offers a wide range of best-in-breed and robust virtualisation solutions. Some of its key virtualisation solutions include the integrated Xen-based virtualisation solutions built on the capabilities of the SUSE Linux Enterprise Server, Kernel Virtual Machine (KVM), Linux Containers, Hyper-V as well as Windows guest support for KVM.

NetApp | Bengaluru

With a NetApp agile data infrastructure, you can run mixed applications in a shared, virtual environment, achieve increased demand and unlimited scalability for your virtual servers, and optimise storage resources for greater efficiency, performance, ROI, and agility. You can also maintain continuous operations during updates, upgrades, and refreshes; and integrate data protection with zero performance impact and faster recovery.

Netweb Technologies | New Delhi

Netweb Technologies provides server and desktop virtualisation to its customers. It is also active in the storage solutions and HPC space, and maintains around 5000 servers a year. The firm operates in six cities across India, and has a direct service and sales channel to the end customers.

Oracle India Pvt Ltd | Gurgaon

Oracle offers the industry's most complete and integrated virtualisation, from the desktop to the data centre. Going far beyond simple consolidation, the company enables customers to virtualise and manage their full hardware and software stack. Designed for efficiency and optimised for performance, Oracle's server virtualisation products support x86 and SPARC architectures, as well as a variety of workloads such as Linux, Windows and Oracle Solaris.

Parallels | Seattle, USA

Parallels uses its open source OpenVZ project as its commercial hosting product for Linux virtual private servers. High density and low cost are the two keywords you'll hear when experiencing a Parallels-based hosting solution. These are the two main reasons why the world's largest hosting companies choose Parallels. But, the innovation doesn't stop at Linux containerised virtual hosting. Parallels has also developed a containerised Windows platform to maximise the number of Windows hosts for a given amount of hardware.

Red Hat | Pune

Red Hat Enterprise Virtualization is a complete virtualisation management solution for servers, powered by the people who brought you Red Hat Enterprise Linux. With Red Hat Enterprise Virtualization, you can maintain business continuity, to scale and integrate both Linux and Microsoft Windows workloads. Red Hat Enterprise
