

Virtualization for Servers 3.1 is built on Red Hat Enterprise Linux, a platform trusted by thousands of organisations on millions of systems around the world for mission-critical workloads. It instantly delivers Microsoft Windows and Linux desktop operating environments to thousands of users from centrally managed servers in the data centre. It lets users remotely access their individual desktops from nearly any client device, including thin clients or re-purposed PCs. With Red Hat Enterprise Virtualization for desktops, you get cross-platform support and a great user experience with the freedom of an open source foundation.

VmWare | Bengaluru

VMware virtualisation lets its clients run multiple operating systems and applications on a single computer, consolidate hardware to get vastly higher productivity from fewer servers, and save 50 per cent or more on overall IT costs. It also offers speed and simplifies IT management, maintenance, and the deployment of new applications.

Wipro | Bengaluru

Wipro's Storage Virtualization Platform solution enables a virtualised platform for the development of storage applications like mirroring and de-duplication in an R&D set-up, thereby enabling easy debugging of the components. The storage virtualisation framework developed by Wipro is a convenient way to implement virtualisation applications without getting into the kernel and device driver intricacies. This easy-to-debug model provides a framework for easy testing of core algorithms.
