

**Akram Wazeer:**

find / user tom > /home/tom.files
 find / user tom -exec cp {} /tmp/tom / \;
 useradd tom -s /sbin/nologin
 Can any linux geek let me know whether these commands are correct? Also, if possible let me know how to extend a volume group via physical extents and also an example on how to reduce a existing volume group by 100MB?

**Jatin Khatri:**

- 1) It must be find / -user tom > /home/tom.files , (if you want to find files created by user tom and what to get a list of that file (tom.file) in tom's home directory)
- 2) It must be find / -user tome -exec cp {} /tmp/tom / \; ; I.E find /path/to/search -name "*.doc" -exec cp {} /path/to/copy/to / \; ; (this command will copy .doc files from the given path and copy it to said path)
- 3) It's ok if you want to add user tom with no interactive login to system

**Abhishek Yadav:**

Which open source OS is good for linux beginners?.

Like · comment

Riya Patankar: Mint, Pear OS, Ubuntu for absolute beginners fedora for beginners, arch and Slackware for advanced users.

Tihologelo Mabitle: Ubuntu.

Ix Mundz: Suse.

Subin M Thevalakkattu: Fedora.

**Pradeep Singh:**

Can any one help me in understanding the relation between ISCSI and FTP? I think both works for data transfer. If I am right in my thinking, then why we introduced ISCSI?

Like · comment

Jeet Singh: AFAIK : ISCSI is for Netgear NAS :: and FTP for a wider approach. Please correct me if I am wrong.

**Pradeep Singh:**

Hey friends, I want to get a USB Internet Data card for 1GB/month high speed access. Which will be the best service provider in terms of speed and coverage area? - Airtel/Vodafone/Reliance/Tata/BSNL/IDEA/MTS or any other? The device should support Linux OS!

Like · comment

Jeet Singh: Tata is best bet. But again it depends on your locality .. "AFAIK Tata is best in terms of speed and network. I personally used it in Mumbai, Rajasthan and Punjab.

**Joko Rasminto:**

Hi, how to install Ubuntu on Windows 7 starter?

Like · comment

Spencer Allen: <https://www.virtualbox.org/>.

Joko Rasminto: Thank you..

Sumant Garg: You can also make a dual boot system.

**Magimai Prakash:**

Why most of the Linux distributions have Python 2.7 and why not Python 3?

Like · comment

- Spencer Allen:**
1. Python 3 is new.
 2. Python 3 is not backward compatible with Python 2, so simply using Python 3 instead Python 2 will break the system.
 3. It will break existing apps.
- Python 2.7 is the final major release of Python 2.x series, so it will remain in the distros even after switching to Python 3.

Magimai Prakash: Thank you..

**Manas Halder:**

I have multi-booted operating System- one is Windows XP and another one is CentOS 6.2. I am using Airtel 3G Dongle for Internet. The problem is that: If CentOS first boots, then Airtel 3G dongle does not detect the network. But after Booting WIN XP 2, if I restart and boot CentOS 6.2, then Airtel 3G Dongle works and shows it is ready for the internet. Can anyone help me?

Like · comment

Riya Patankar: Try wvdial.

Yogesh Jadhav: Insert your dongle in back side of the USB port instead of the front one and then try.

**Karthigeyan Kith:** How to use Windows office document in Linux?

Like · comment

Debashis Sarkar: odt or doc format opens in libre office.

Karthigeyan Kith: What about others like Excel?

Riya Patankar: Libreoffice spreadsheet is just an example of such softwares.

Subin M Thevalakkattu: Open windows office document in Libre office application.

Sumant Garg: You can also use Apache open office in Linux.
