

with new features that improve discovery and search on the site. The features are: 'Discover', 'Search', 'Connect' and 'Links'. The most important of the new features is the 'Discover' tab. This enables users to discover all the content in the tab by turning it into one giant, single stream that contains tweets, activities, trends and account suggestions. The new 'Discover' tab will be available on Android devices. Apart from retrieving content, navigation between 'Activity' and 'Trends' is also possible at the top of the 'Discover' tab.

Next up is the 'Search' feature, which displays all relevant streams, similar to the stream in 'Discover', at one place. The 'Connect' feature now provides a simpler experience; the default view is 'Interactions', which shows you new followers, re-tweets and mentions. If you prefer to view only your 'Mentions' in 'Connect', you can adjust the default in 'Settings'—find the 'Connect tab' option and select 'Mentions only'.

And finally, there's 'Links'. This feature lets you click on a URL in a tweet, go directly to that website from any timeline, and get to content highlighted on Twitter faster. Earlier, this was more cumbersome and lengthy. These updates are expected to offer a better experience for Twitter's global user base.

A bracelet that can boot Ubuntu on any PC!

Barcelona-based Now Computing has come up with an Ubuntu product, which can make your computer childproof. Now Computing has launched an Ubuntu-based bracelet that can be plugged into a PC or a Mac to boot the Ubuntu Linux distribution. Dubbed as StormFly, it's a USB 3.0-based wristband. "When you plug StormFly into a Mac or PC, you reboot the computer, interrupt the boot process and then redirect all of the computer hardware to run everything from StormFly," according to the company.

The StormFly device has been priced at US\$ 59 and is a 16 GB USB 3.0 flash drive with a bootable version of Ubuntu. But what is the point of having this device? "StormFly is perfect as a family computing solution. Unfortunately, the younger family members (and older ones) can often download the wrong things and slow the family computer down. Because StormFly acts as an independent computer, the operating system on the PC you use it on will not even turn on. Bottom line - if everyone uses a StormFly you prevent problems on your home computer. Happy kids. Happy you," explained a company source.

Speak and compose a mail with Chrome 25 Beta

A cursory glance at the headline and it might seem like a scene straight out of a sci-fi movie. But we are talking about the beta version of Google Chrome, which comes with the Web Speech API for developers. "With the inclusion of the Web Speech API for developers, users can start enjoying new, interactive experiences with Web apps—you can compose an e-mail by just speaking. With this new JavaScript API, developers can integrate speech recognition into their Web apps. So, in the near future, you'll be able to talk apps into doing all sorts of things," an official posting stated.

If the feature works flawlessly, it would be welcomed by almost everybody. "Using your voice to search on your computer or phone is handy, and also if you could dictate documents, have a freestyle rap battle, or control game characters with your browser using only your voice. To make sure your Chrome installation isn't being slowed down, the new Chrome Beta will automatically disable some extensions on Windows that may have been added by third party programs without proper acknowledgement from users.
