

Table 1

	OpenVZ	Xen	KVM	VirtualBox	VMware Player	VMware ESX/ESXi
Type of hypervisor	Hosted	Bare-metal	Hosted	Hosted	Hosted	Bare-metal
License	GPL	GPL	GPL version 2	GPL version 2	Proprietary, free of charge for personal non-commercial use	Proprietary
Host OS supported	Linux	NetBSD, Linux, Solaris	FreeBSD, Linux, Illumos	Windows, Linux, Mac OS X x86, Solaris, FreeBSD, eComStation	Windows, Linux	No host OS
Guest OS supported	Linux variants	FreeBSD, NetBSD, Linux, Solaris, Windows XP & 2003 Server	FreeBSD, Linux, Solaris, Windows	DOS, Linux, Mac OS X Server, FreeBSD, Haiku, OS/2, Solaris, Syllable, Windows	Windows, Linux, Solaris, FreeBSD, OSx86 (as FreeBSD), virtual appliances, Netware, OS/2, SCO, BeOS, Haiku, Darwin,	Windows, Linux, Solaris, FreeBSD, OSx86 (as FreeBSD), virtual appliances, Netware, OS/2, SCO, BeOS, Haiku, Darwin, others: run arbitrary OS
USB support	Yes	-	Yes	Yes	Yes	Yes
Live migration	Yes	Yes	Yes	Yes	No	Yes
Snapshots per VM	Yes (Vz-dump)		Yes	Yes	No	Yes
GUI	Yes (EasyVZ)	Yes	Yes	Yes	Yes	Yes

Installation and configuration

1. Download the repository file and (all these steps must be performed as the *root*) put it in the */etc/yum.repos.d* directory:

```
wget http://download.openvz.org/openvz.repo
```

2. Import the GPG key that belongs to the repository:

```
rpm --import http://download.openvz.org/RPM-GPG-Key-OpenVZ
```

3. Find the OpenVZ kernel package:

```
yum search vzkernel
vzkernel.i686 : The Linux kernel
vzkernel-debug.i686 : The Linux kernel compiled with extra debugging enabled
vzkernel-debug-devel.i686 : Development package for building kernel modules to : match the debug kernel
vzkernel-devel.i686 : Development package for building kernel modules to match: the kernel
vzkernel-firmware.noarch : Firmware files used by the Linux kernel
```

vzkernel-headers.i686 : Header files for the Linux kernel for use by *glibc*

Name and summary matches only, use "search all" for everything

4. Install *vzkernel.i686* with *yum install vzkernel* and it will automatically update the GRUB bootloader.
5. Edit */boot/grub/menu.lst* to verify the OpenVZ kernel entry.

```
title OpenVZ (2.6.32-042stab072.10)
    root (hd0,0)
    kernel /vmlinuz-2.6.32-042stab072.10 ro
