

YOU SAID IT

Include more content on Raspberry Pi

I have been a long-time subscriber of your magazine—in fact, right from Issue 1. I came to know of Raspberry Pi through this magazine and recently got one. I was expecting some more articles on it in OSFY but have been disappointed. However, I was happy to see links to tutorials in your website. I am sure this tiny computer is going to bring a lot of cheer to the student and hacker community so I hope that at least two pages in your magazine will get devoted to Raspberry Pi.

The lack of VGA is a big concern in Raspberry Pi. The composite video's resolution is very poor in our old Sansui HDMI LCD monitor and I was not getting a HDMI output. Meanwhile, I wanted to try networking in Ra Pi. So, I connected it with a Compaq laptop through a router. The laptop has a Tata Docomo 3G dongle for Internet access. When this Net connectivity is shared, it got the IP address as 192.168.0.1. I then gave static IP to Ra Pi as 192.168.0.2 and the connectivity was established. After suitable entries were made, I found that Raspberry Pi got connected to the Net. Of course, it was all possible due to Google as well as Raspberry.org.

Again, tweaking the entries in text files was difficult. So, through PuTTY, I logged into Ra Pi and could easily modify the text entries. The file `-/boot/config.txt` is very important and I am at present studying various combinations for HDMI.

I am sure such information written professionally will be of great help to the Ra Pi community. Years back, I had a Spectrum computer, which is spoken of highly even now. There were so many magazines and books (that still adorn my bookshelf) on the Spectrum that it was a pleasure to leaf through them. Perhaps, some magazine on Raspberry Pi will come out some day but till then, I am sure OSFY can come forward to do the needful.

ED: Thanks a lot for sharing your feedback with us. It makes us feel good that we have been able to motivate you to acquire a Raspberry Pi for yourself. We have featured a few articles on Raspberry Pi in OSFY. ('Getting Started with Raspberry Pi' in November 2012 and 'Control Raspberry Pi's GPIO Pins with PHP' in December 2012.) We are also planning to start a series on it and you will get to read these articles in the upcoming editions. The OSFY team is constantly trying its best to come out with varied articles related to open source and will continue to do so, always. Keep writing in with your suggestions; we welcome them.

Changing the colour of the code snippets

I am a regular reader of OSFY. I have a suggestion. Currently, the source code snippets are printed in light blue. On a white paper, the text printed in light blue is indeed difficult to read. I would appreciate it if you make the colour of the code a darker shade of blue.

—Ganesh Sanjiv Naik,
ganesh@levanatech.com

ED: Thanks a lot for bringing this issue to our notice. We certainly agree with you that the colour of the code needs to be changed for better readability. We have changed the colour of the code and increased its font size too. Hope we have been able to help you.

On becoming a member of the FOSS community

I'm an assistant professor in a reputed engineering college in the northern part of Karnataka. My colleagues, my students and I want to become members of the FOSS community, so that we can get regular updates about the latest happenings in this arena. I would be grateful to you if you let me know on how we could do so. This will help me in inviting good speakers to deliver lectures on the latest trends in open source technology at my college.

—Manju Shirur,
manju_shirur@yahoo.co.in

ED: Thanks for reaching out to us. We are indeed glad to know that you want to be a part of the FOSS community. To learn more about the latest happenings in the open source arena, you can:

1. Subscribe to Open Source For You at <http://electronicsforu.com/electronicsforu/subscription/subsc2scheme.asp#>.
2. Subscribe to the mailing list of Indian Linux Users Group (ILUG) where you can interact with experts who have immense knowledge in this domain. ILUG Chennai is quite active in southern India. Here is the link: <http://ilugc.in/mailling-list/>
3. You can be a part of different events related to open source such as Open Source India, which is held in Bengaluru every year. For more details, check out <http://www.osidays.com/>. Hope this helps. Let us know if you have any further queries.

ClearOS CD missing from the February issue

I received my subscriber's copy of OSFY a few days back. And I was disappointed to find that it came only with the Fedora 18 DVD sans the ClearOS CD. Kindly look into this matter. My subscription number is L21591.
