“If you start looking to the community for support, there would be no innovation”

Bruno Georges, director, software engineering, Enterprise Application Platforms, Red Hat Asia Pacific Pte Ltd

A majority of the users of open source products feel that their technical concerns should be addressed by the community. This may or may not happen. The idea behind having a community is to foster innovation and not just provide support.

Diksha P Gupta from *Open Source For You* visited JUDCON 2013 and spoke to the developers. **Bruno Georges**, director, software engineering, Enterprise Application Platforms, Red Hat Asia Pacific Pte Ltd and **Arun Kumar**, general manager, Red Hat India, aired their concerns in an exclusive tête-à-tête. Read on...

Q What is different in JUDCON 2013, compared to 2012?

Bruno: Not just in India but globally, JUDCON 2013 has been very well received this year. We saw increased participation not only in terms of numbers but also in terms of the sharing that happened during the sessions. People were not busy using their laptops but were actually attentive towards the speakers. This, according to me, is a major

change in JUDCON 2013 as compared to the last year. In India, the participants want to know more about the current trends in Java and where it's heading.

Q Have the awareness levels changed, reflected in the questions that you have had to face from the audiences?

Bruno: A lot has changed in this regard too. This time at
