Mainstream Enterprise Adoption of Open Source Databases

A conversation with Ed Boyajian,
CEO, EnterpriseDB

Are enterprises embracing open source database software today?

Absolutely. In 2012 we counted 32 of the Fortune 500 as customers and 47 of the Global 1000. That includes some of the biggest IT users in the world. IT operations at the Federal Aviation Administration, NIC, Fujitsu, Sony-Ericsson and TCS are all using Postgres or Postgres Plus from EnterpriseDB. Interestingly, also noteworthy, companies like VMware, Microsoft (through its acquisition of Skype), Apple and Facebook (through its acquisition of Instagram) are using PostgreSQL. We are at the beginning of an explosion.

Companies are finding that for a fraction of the cost of traditional databases, PostgreSQL can deliver the sophisticated features and capabilities they require. PostgreSQL has had decades of hardening and development by a talented and committed community of developers as well as a fast-growing, supportive ecosystem of database specialists.

How difficult is it to migrate to a new database?

EnterpriseDB has developed a proven Oracle compatibility solution that enables our customers to run many Oracle applications using Postgres Plus. Postgres Plus natively supports many of Oracle's system interfaces, facilitating migrations with minimal cost, risk and disruption. Existing technical staff – from developers to DBAs to operations teams – leverage existing Oracle skills to build and manage Postgres Plus databases. EnterpriseDB also has developed a comprehensive migration program that begins with an Oracle migration assessment and provides support and assistance with the process all the way through to deployment.

What happens after Postgres databases are deployed?

Regardless of whether an organization is deploying applications based on community PostgreSQL or Postgres Plus, EnterpriseDB provides a portfolio of solutions that ensure success. We have made the long-term commitment to meeting the demands of the enterprise with Postgres-specialized products, support, and services. What's more, we are continually developing new Postgres database enhancements and sponsoring the efforts of the PostgreSQL community. More than 2,000 organizations around the world turn to EnterpriseDB for Postgres-related products and services.

How do customers contact EnterpriseDB?

Customers can check our web site at www.enterprisedb.com for a wide array of information on our products and services, call +91 20 3058 9500 or e-mail sales@enterprisedb.com with questions or comments.

Contact us today about : • Software Subscriptions • Technical Support 24x7x365
• Migration Assessments • Training for Administrators and Developers • Professional Services
Call: +1 781-357-3390 or 1-877-377-4352 (US Only), Email: info@enterprisedb.com
