

VMware announces new campus in Bengaluru

Here is some good news for India! VMware Inc, the global leader in virtualisation and cloud infrastructure, has announced a multi-year investment of \$120 million that includes a long term lease for a new 39,019 sq m (420,000 sq ft) building in South Bengaluru, currently under construction. VMware's India-based R&D and support operations are second in size and scale only to those at the company's headquarters located in Palo Alto, California, U.S. Its existing facilities in Bengaluru will be consolidated into the new state-of-the-art premises, which will seat 2,700 employees when ready next year. The campus will accommodate new and ongoing product R&D, as well as a large staff supporting VMware's global operations and India's sales teams.

VMware's R&D operations in India make a significant contribution to the company's portfolio of virtualisation and cloud computing products, all designed to help VMware customers navigate the journey to a new era of IT.

Acquia open sources iOS Drupal publishing app

This is major news for all Drupal lovers. Acquia, the commercial provider of Drupal Web CMS services, has released the code base for building native iOS apps that can post content straight to a Drupal website — the first of its kind. The Drupal-services company has posted the code for Drupal Create on GitHub with a BSD-like licence.

The Drupal Create code served as a base for the iOS app, Acquia, released for publishing content on its hosted Drupal Gardens service. "With this release, Acquia is kick-starting the development of mobile content publishing apps for Drupal," Drupal co-creator and Acquia co-founder, Dries Buytaert, said in a statement.

under 'Shared with Me', 'Starred', 'Recent' and in any other sub-folder in Drive. Google's QuickOffice app for Android can now be downloaded on Google Play.

You can now access Gmail in six Indian languages!

It seems Google has big plans to lure Indian consumers. After recently launching the Google Nexus 7 tablet on Google Play in India and introducing other Google Play products like eBooks and Movies, the search-engine giant is now offering features

like additional language support on Gmail for users who are still comfortable with using non-Android-based feature phones.

The untapped Internet user base still constitutes a large percentage of prospective Internet users and by providing additional language support other than English and Hindi, Google is eyeing the mass users who still switch on their network via a Java-based feature phone and who prefer to communicate in their native languages.

Apart from the Gmail language feature, the search-engine giant has also released an offline-mode feature for its Google Translate app. The new feature offers offline translations in over 50 languages. This comes handy for all the frequent travellers, who are not always prone to being active on their data packs. To use the offline-mode translation feature, users have to select 'Offline Languages' from the app menu.

Here's a new design for the 'Twitter For Android' app

Twitter, the popular micro-blogging site, has received its latest Android app update that displays tweets in a whole new wider and taller format. The updated version offers a native Android experience to users. There is better content

viewing in tweets and the navigation bar at the top has been made a lot flatter compared to the previous versions.

The 'Twitter for Android' app has been in dire need of enhancement, and this timely update brings a refreshed and more reader-friendly look to the Twitter page.

"The app now brings wider and taller timelines that

fill the screen, a flat navigation bar, tap and hold for quick actions, and more," the company stated.

Apart from the content feature, the update enables users to swipe across the screen to change tabs and auto-complete suggestions for usernames and hashtags. Also, the next time you plan to start a conversation with a username and hashtag, Twitter will offer the 'friends to be included' option while composing the tweet.

What's new in GNOME 3.8?

The developers of the GNOME project have announced the release of the latest version, GNOME 3.8. Its new features include a new Clocks application, enhanced search functionality, new privacy settings and a number of design changes throughout the desktop environment. The redesigning will now aid in finding applications faster.
