

Enter rule no. that you want to delete

☒ FILTER ☐ NAT

INPUT POST ROUTING

Delete Rule

Figure 1: Delete a rule from iptables

```
$cont = "sudo iptables -D $op1 $id";
shell_exec($cont);
print "<script>alert('Rule $id from $op1 is
deleted');</script>";
include("deleterule.php");
exit();
}
else
{
$cont = "sudo iptables -t nat -D $op2 $id";
shell_exec($cont);
print "<script>alert('Rule $id from $op2 is
```

```
deleted');</script>";
include("deleterule.php");
exit();
}
```

?>

\$_POST is an associative array used to get the form field's value if the form data is transferred via the post method. To execute a formed string (iprule) on the basis of entered parameter values, the `shell_exec()` function is used. The above code is used to delete a specific input chain rule, an output chain rule or forward chain rule by filtering and pre-routing or post-routing the chain rule from NAT by giving a rule number.
