transactions and ensuring that the database remains swift and receptive.

- Playing the role of the watchdog and ensuring that the organisation's data is safeguarded. This means the DBAs have to chart out strong security policies involving the data as well as users accessing that data."

Vinay Pandey also believes that since organisations are shifting to ERP and CRM applications, there has been a rise in the demand for DBA professionals.

Of pre-requisites and skillsets

A basic knowledge in software development languages is the foremost requirement for a DBA, as platforms like SQL Server are used in organisations. Poorti Srivastava, centre head, Astrid Solutions, Bengaluru, says, "Knowledge of software languages makes the job of DBAs easy to a large extent. Apart from being familiar with core database concepts, they should have logical abilities and should also be aware of all the features available in the database tool that they are using. The DBA should have the ability to interact with the database through query languages like SQL and PL/SQL." With the rapid rise of data consumption, the DBA should have the skill to support more data. "The capability to foresee and implement the required database changes to accommodate the organisation's growth is a must-have skill of the DBA," feels Srivastava.

Importance of certifications

Certifications in DB administration certainly boost

the employability of a candidate in the recruitment market, believes Isha Malhotra, director, Tech Altum, Noida. "Certifications demonstrate your commitment and seriousness towards your domain, and they do increase the employability of a candidate. However, the skills go beyond certifications as recruiters are more interested to know what candidates can do, rather than their certifications. So, it's important to arm yourself with the right skillsets," says Malhotra. The available certifications for MySQL are Oracle Certified Associate, MySQL 5, Oracle Certified Professional, MySQL 5 Developer, Oracle Certified Professional, MySQL 5 Database Administrator, Oracle Certified Expert, and MySQL 5.1 Cluster Database Administrator.

Some handy tips to get hired

If you wish to explore this interesting field as a career option, here are some tips:

- Work hard and smart
- Practice and then implement
- Keep yourself upgraded with every new release and version
- Know the current market trends.
