

A List Of Website Security Providers

ESDS | Nashik

ESDS' one-stop security solution is dual-natured—dangerous for Web criminals and generous towards online principals. Virtual and physical server and network isolation technology, firewall security and IDS protection against DDoS attacks secures your website thoroughly. Unsparing security testing audits detect end-to-end Web vulnerabilities like malware, botnets and brutal infections. Cleverly written algorithms mercilessly divert the direction of a forthcoming threat. The enterprise-class intuitive and specialised scanning tool, MyScan, is about to be launched by ESDS. This is set to perform absolute and precision scanning of Web apps, so that you aren't left with a hole in your pocket due to a breach in website security.

Leading Clients: ESDS's esteemed clientele operating on a high security model include Mahagenco, Airtel, Teamviewer, goibibo.com, Kafila Tours and Travels, KFC, Pizza Hut, Samsonite, HCL and many others in IT, manufacturing, finance, ecommerce, and other business sectors.

IndusFace | Vadodara

IndusGuard Web from IndusFace is a zero touch, non-intrusive, cloud-based solution, which safeguards Web applications by continuous and comprehensive scanning for systems and application vulnerabilities, as well as malware. The company's security consulting team uses the multistep Open Source Security Testing Methodology (OSSTM) to assess vulnerabilities. Combining the results of these tests with the consultants' experience gives you a comprehensive view of your vulnerabilities and a sturdy tool to fight them.

iViZ Techno Solutions | Bengaluru

iViZ is the industry's first cloud-based on-demand penetration testing service for Web applications. Unlike conventional solutions, iViZ Security delivers consultant-grade quality with an on-demand experience. It provides a hybrid solution that integrates automation with manual testing by security experts. This results in a cost-effective SaaS model to achieve zero false positives, manual expert validation, and business logic testing. The key advantages are high quality, on-demand manageability, high scalability and an unmatched service-to-price value.

Kiva Cyber Securities | Hyderabad

The company helps organisations improve their security position by first identifying their requirements and then providing a comprehensive plan to improve the overall security of applications, databases and networks. Kiva offers the following services: vulnerability assessment, penetration testing, Web application security, network security, wireless network security, social engineering database security, source code review, risk assessment, remote access testing, and more.

Network Intelligence | Mumbai

The company specialises in Web application security assessments, source code reviews, and implementation and training on Web security solutions such as Web application firewalls. The team has tested thousands
