

of Web applications across dozens of technologies for clients that include all the top five private banks, three out of the top five public sector banks, major IT/ITES companies, and more. The company extensively uses open source tools like SQLMap, Sqlninja, Nikto, BEEF, dirbuster, Arachni Scanner and BT5 / Kali Linux for security assessment.

QA Infotech | Noida

QA Infotech has a dedicated, proficient security testing team experienced in both open source and proprietary tools to take on security testing from the early stages of the SDLC (software development lifecycle). The company has integrated its testing process with industry best practices such as the Open Web Application Security Project (OWASP). It provides end to end security testing for Web application vulnerability assessment, covering configuration management testing, business logic testing, authentication and authorisation testing, session management testing, data validation testing, denial of service (DoS) testing, Web services testing, Ajax testing, testing for OWASP Top 10 vulnerabilities such as XSS, SQL Injection and more.

RRN Technologies | Chennai

RRN Technologies offers corporate, academic and organisational support for the Open Web Application Security Project (OWASP), the Web Application Security Consortium (WASC) and the Organization for the Advancement of Structured Information Standards (OASIS). The company recommends that its clients go in for open source tools for Web security solutions. The open source Web security solutions that it offers to its clients are Web application security assessment (vulnerability assessment and penetration testing), secure source code review (all languages), open source Web application firewalls, OWASP training for developers and employers, and more.

Sandrock eSecurities | New Delhi

Customised IT security infrastructure development, Web application security solutions, network audits and risk assessment are the company's main capabilities. The company also uses open source tools to provide its clients good security assessment. Its Web application vulnerability assessment and penetration testing package includes comprehensive Web application vulnerabilities coverage, hybrid testing (automated scanning and expert verification), artificial intelligence-based complete Web application attack simulation, automated exploitation and false positives elimination, Web application vulnerability management testing, and more.

Secfence Technologies | New Delhi

The company offers comprehensive VA/PT services to test the security of your infrastructure. Its penetration testing approach, the Pentest++ is essentially different from other traditional approaches that only focus on the smaller picture. The Pentest++ includes client side exploitation, zero day attacks, social engineering, etc. Its unique source code review process exposes the level of security in the applications. Its application testers can quickly identify possible code defects from the security perspective and help in suggesting a secure code layer. The review process is a hybrid approach of manual assessment as well as various commercial and non-commercial tools.

Secugenius Security Solutions | Ludhiana

This is a company with a corporate clientèle in more than 25 countries. The firm covers a wide range of services in website security issues like complete website security and malware removal, which further includes scanning, filtering, malware and spyware protection, audit for security issues, Cpanel/Plesk security, security plug-in analysis, website optimisation and real time protection from various attacks by hackers.
