

Windows to Kali Linux and Backtrack. For security testing of websites and Web servers, we use various tools like Wireshark, N-Map, Nessus, Acunetix, etc.

SecurEyes | Bengaluru

Apart from the standard services, the company offers on-demand security solutions through an expert panel of highly skilled consultants that help organisations by providing that extra layer of security so that the business becomes secure by design. The company provides on-demand security solutions like secure architecture design services for new IT implementations; incident handling and damage control services for hacked networks, systems and applications for government organisations, banks, and multinational broking firms. It provides security evaluation services for standard and non-standard security products, and more.

S.M.O.K.E Technologies | Jaipur

S.M.O.K.E. Technologies is focused on Web security and thus offers SSL to protect sensitive user data from phishing and hacking attacks. The SSL protects all the sensitive transactions from session hijacking attacks during online purchases, Internet banking and customer data exchanges. S.M.O.K.E. offers standard SSL, wildcard SSL, extended validation SSL, SAN SSL, code signing certificates, malware/HackAlert SSL, etc. To find vulnerabilities in websites, the company uses tools like Metasploit, Nikto, W3af, Acunetix, Nessus, Nexpose, and a few other tools written by its security experts.

Valency Networks | Pune

Valency Networks comprises a team of certified ethical hackers who are subject matter experts in cyber security. Its services include network architecture review, vulnerability assessment and penetration testing, network auditing and corporate training. The company uses open source penetration tools such as Nessus and Nexpose, among many others, to track an unprecedented variety of website security problems—only possible due to the company's subject matter expertise. Its Web penetration testing report is famous among its customers for the detailed content on technical resolutions, which is often complemented with years of experience-based consultancy.

Websense | Bengaluru

Websense is a global leader in protecting organisations from the latest cyber attacks and from data theft. Websense's TRITON comprehensive security solutions unify Web security, email security, mobile security and data loss prevention (DLP) at the lowest total cost of ownership. Tens of thousands of enterprises rely on Websense TRITON security intelligence to stop advanced persistent threats, targeted attacks and evolving malware. Websense prevents data breaches, intellectual property theft, and enforces security compliance and best practices. A global network of channel partners distributes scalable, unified appliance- and cloud-based Websense TRITON solutions.

ZenQ | Hyderabad

ZenQ has expertise in using open and industry standard tools such as WebScarab, W3aframework, Burpsuite, etc., to perform vulnerability assessments and penetration testing for both Web and mobile applications. The company follows the best practices in the industry such as OWASP (Open Web Application Security Project) for conducting assessments on Web/mobile applications, comprehensive security analysis, potential security issue coverage, and more.
