

India. The details of the game read, "Help Modi through all the states and gather the votes to win the election and become PM of India." It is purely for entertainment and not endorsed by either Modi or the BJP, says the developer.

PicUntu 4.4.3 now brings Desktop Ubuntu Linux onto devices with the Rockchip RK3188 processor

Ever wished that your Android tablet or TV box with a Rockchip RK3188 processor could run a desktop operating system instead of a mobile OS? Well, here's help. There is a new build of PicUntu, which claims to bring the full Ubuntu Linux experience to devices with RK3188 processors.

Coming to the specifications, the Rockchip RK3188 processor is a quad-core ARM Cortex-A9 chip with Mali 400 graphics. It is said to be one of the fastest Cortex-A9 processors. However, it does not offer support for hardware-accelerated graphics when it is running PicUntu. While users can watch videos or play games using PicUntu, they will have to depend on the CPU power for that. But the better news is that everything else works like Wi-Fi, audio, and network drivers. The 4.4.3 version of PicUntu comes with support for Bluetooth hardware, for which you will need a USB Bluetooth adapter.

You can find instructions for running PicUntu at the Rikomagic UK forum. It officially supports devices like the MK802 IV TV stick. There are builds available for use with 720p and 1080p displays too.

France's law enforcement agency moves 37,000 PCs to Linux OSs

Talk about Linux going places and we have a number of examples! In the latest case, the National Gendarmerie of France, its law enforcement agency, has switched 37,000 desktop PCs to a custom version of the Linux OS. The agency plans to move all its 72,000 PCs to open source by the summer of next year. The agency has said that the total cost of ownership while running on Linux/open source is approximately 40 per cent less than the proprietary software from Microsoft. The data was published on the European Union's Interoperability Solutions for Public Administrations website. To make the smooth transition, the agency first switched to cross-platform open source apps like OpenOffice, Firefox, and Thunderbird, while employees continued to use Windows. Once they were adept with the new apps, they moved to the Linux OS running the same apps.

This migration began in 2004. In order to save money, the agency switched from Microsoft Office to OpenOffice. Then the agency rolled out Firefox and Thunderbird in 2006. Finally, in 2008, it switched the first batch of 5,000 users to a Linux OS based on the Ubuntu distribution. This can easily be called one of the largest known government deployments of Linux on the desktop.

Microsoft updates Skype app for Android

The Skype update for Google's Android operating system is now live. Like the recent iOS update for the application, the Android update also comes with better voice calling and video quality in the 'Skype for Android' application. The new version is v 4.4 of Microsoft's Android application and it allows the screen of your smartphone or tablet to remain turned on while you are connecting a call on the Skype app.

Further, according to Microsoft's update release notes, when a call has been

ESDS data centre facility soon in Navi Mumbai

ESDS has always taken major strides on the technological front. This time, the firm is coming up with a data centre facility in Navi Mumbai soon. With the Bhoomi puja held on October 13, 2013, in Navi Mumbai, Piyush Somani, managing director and CEO of ESDS, has laid a new foundation. Since ESDS' successful establishment in 2005 at Satpur, Nashik, the commercial IT facility has seen only advancements in its customer base owing to its unique service portfolio.

The upcoming IT facility at Metro-city Mumbai is on a vast 9290.3 sq m platform. Somani decided to establish an IT facility in the Tier-I city so as to extend world class data centre services to a wider audience. "We're set to mark a new beginning in the global data centre world with our new and upcoming data centre facility at Navi Mumbai. We're looking not just at Maharashtra for DC establishments, but are focused on becoming the best IT solutions provider by situating ourselves in that part of southern India which is well-recognised and ranks No 1 in the list of best Indian IT hubs—Bengaluru. It happens to be our next DC destination after which we will be capable of creating a network of 10 GBps amongst all the three data centres we plan to have in India. Once we do that, we're confident of delivering a better performance for cloud solutions in India than what Amazon does in the United States," he said.

ESDS became recognised for its customised IT solutions and Somani, in his speeches at a number of local and state-level events, has always highlighted its focus on customisation. ESDS continues to be customer-oriented.
