K. Y. Srinivasan
Principal Architect,
Microsoft

Lux Rao
CTO—Technology
Services, HP India Sales

Venkatesh Swaminathan
Country Head
The Attachmate Group

Sreehari S.
MD, Attachmate India
Development Center

Arun Kumar
General Manager
Red Hat India

Open Source India testimonials...

Yes, Open Source India has earned many kudos over the years. Allow us to share what people have to say about it and what they look forward to...

"This is my fourth year of participation in OSI Days and like each year, I am very excited about listening to some of the best subject matter experts the industry has to offer, over the three days of the conference. So much has changed in these four years with the emergence of devices and services powered by the cloud and I am hoping to attend as many sessions as possible across the kernel, mobile apps and database tracks. But above all, I look forward to very interesting conversations on technology with a lot of my friends from the open source community, over cups of coffee, through the three days of the event."

**—Mandar Naik, director,
Platform Strategy at Microsoft**

"Open Source India is a well-planned premier open source convention and offers a great platform for users looking to implement open source solutions in their business. It also lets companies connect to the right target audience. Open Source India has grown over the years

and I hope that it continues with its growth story for the years to come."

**—Lux Rao, CTO,
Technology Services at HP India Sales**

"Open Source India has been very engaging and enriching, to say the least. I have always found the sessions very informative and these have egged me to implement some solutions in my company. Moreover, it offers you a great platform to connect to your peers and understand the best practices of the industry."

—Balaranjith T, GM, IT, Atul Limited

"It is a privilege to be associated with Open Source India 2013. The adoption of open source technologies has been accelerating in India over the last 24 months, and forums such as these will help foster collaboration between the communities of developers, partners and customers. I look forward to meeting with customers and the developer communities, and hearing from them about the opportunities and challenges for open source in India."

—Arun Kumar, general manager, Red Hat India

expertise with a diverse audience. So, if you wish to listen to them and learn from the best, this is the event to attend. The three-day convention will feature speakers from the corporate domain and the community. Some of the star speakers include Dr KY Srinivasan, principal architect at Microsoft; Lux Rao, CTO, Technology Services at HP India Sales; Arun Kumar, general manager at Red Hat India; Venkatesh Swaminathan, country head, The Attachmate Group; and Sreehari S, MD, Attachmate India Development Centre.

And some of the hot topics to be covered are...

We caught up with a few speakers to learn more about what they plan to cover. Dr KY Srinivasan of Microsoft, who will talk on 'Running and Managing Linux on Hyper-V', was quick to respond: "Microsoft is committed to addressing the heterogeneous needs of enterprise data centres. To this end, we have invested in making Linux a 'first class' environment on all of our platforms, including Azure, our public cloud service. In

this presentation, I am going to talk about our Linux journey, in general, and give an update on our ongoing Linux investments."

Arun Kumar of Red Hat India will share his insight on the topic 'Connect to a Community of Innovation'. He shares, "Connections are very important. Consumers drive innovation, and open source development responds to their needs faster. The two major IT paradigm shifts of the last two years will be discussed, as well as why Big Data, the mobile, and cloud computing are not the biggest changes to the industry." He adds, "People should attend this event to see the impact that open source software is having on mainstream IT. The notion that OSS is only being adopted by cutting edge technology companies and is not mainstream is a myth. Also, the forum will be able to showcase the depth of knowledge and skills in open source software in India, which is critical for sustaining the momentum of IT growth in the future." Lux Rao from HP India Sales will touch upon the value proposition of OpenStack, and how it could be a great enabler for an organisation's IT strategy.
