

“Linux interoperability has been enabled through work across Microsoft”

Dr K Y Srinivasan, principal architect at Microsoft

Q We last saw you at OSI Days 2011 where you talked about the Linux kernel. What have you been working on since then and how have things progressed with Microsoft's contributions to Linux?

When I addressed this conference two years ago, we had got the core of our Linux support on Hyper-V out of the staging area of the Linux kernel. This was a significant

Players in the Linux community often find Microsoft and open source technology not quite in sync. Ironically, Microsoft is one of the major contributors to the Linux kernel, but is still perceived as being anti-open source. To clear the air, we, at *OSFY*, decided to check this out with Microsoft, directly. **Diksha P Gupta** from the *OSFY* team spoke to **Dr K Y Srinivasan, principal architect at Microsoft**, about how the company is moving ahead on the open track, and how it is as much a part of the ecosystem as we all are. Excerpts:

effort that propelled Microsoft into being one of the top 20 contributors to the Linux kernel. Since then, we have been steadily working on realising our vision of making Linux a first class environment on our platforms (both public and private cloud environments).

Over the last couple of years, in addition to getting the remaining Hyper-V specific drivers out of the staging
