

Symantec's Norton Antivirus for Android lets you easily control the security for your devices in one convenient place on the Web. It sets off a 'scream' alarm, so you can quickly find your missing mobile device. It blocks fraudulent (phishing) websites to protect your sensitive personal information when you use mobile networks and Wi-Fi connections. It saves contacts from your Android mobile device, so that you can easily restore them if they are lost or deleted and share them across devices. It locks a lost or stolen phone or tablet to prevent strangers from using it and viewing anything that's stored on it.

Quick Heal AntiVirus for Linux offers Linux networks complete system vulnerability coverage against complex strains of malware, and unauthorised devices. With this suite deployed for a network, users have instant visibility into their overall security status. Its automatic virus updates add to its overall online and real-time protection. Quick Heal Total Security for Android offers advanced protection against malware, and features such as blocking unwanted SMSs and calls. What makes this suite complete is that it backs up data on the cloud, traces stolen or lost mobile devices, and has parental control for monitoring Internet activity on the device.

SafeNet's eSafe Appliance is the industry's first Linux-based content security and anti-virus gateway product. The eSafe Appliance is pre-loaded with a hardened OS and provides a platform to operate the award-winning eSafe Gateway or eSafe Mail content security software. eSafe Gateway is a powerful content inspection gateway that includes anti-spyware and anti-virus scanners, provides full content security protection for any connection established between the internal LAN and the Internet, scans and cleans data passing through SMTP, FTP, and HTTP connections, and operates with any firewall or router.

More than 100 million users in 150 countries rely on Sophos' complete security solutions as protection against complex threats and data loss. Simple to deploy, manage and use, Sophos' award-winning encryption, endpoint security, as well as Web, email, mobile and network security solutions are backed by Sophos Labs -- a global network of threat intelligence centres. Sophos Anti-Virus for Linux software detects and cleans up viruses, Trojans, worms and spyware, as well as adware and other potentially unwanted applications. Sophos Anti-Virus provides virus definitions and software updates regularly when you are connected to the Internet.

Trend Micro ServerProtect for Linux 3.0 offers comprehensive real-time protection for enterprise Web servers and file servers, preventing them from spreading viruses, spyware and other Web threats to internal or external endpoints. Managed through an intuitive portable Web-based console, ServerProtect provides centralised virus/malware scanning, pattern updates, event reporting and configuration. Proof of the solution's stability and reliability is the certification from all major Linux vendors as well as independent third parties such as Virus Bulletin. ServerProtect for Linux is a key component in the comprehensive threat prevention offered by Trend Micro Enterprise Protection Strategy.
