

to their proprietary counterparts.

Companies like Hungama Digital Entertainment, Uttam Energy, Bilcare, Euronet, Star Union Dai-Chi and iGate have all switched to open source software. The list, according to the report, is growing. The report said that shifting to open source software is not limited to servers only—critical functions are now turning to open source. Customer relationship management software, business intelligence software, etc, are now running on open source software, Rahul De, chair professor in HP was quoted as saying.

Beware! Google reads your mails on Gmail

At a time when privacy concerns have become paramount in the light of scandals like Prism, in a shocking revelation, Google has admitted that it opens and reads user mails, to direct targeted advertisements based on the contents of the mail.

What's more, Google has also said that it accesses mails that are sent by third party mailing domains that haven't even signed Google's terms and conditions. Google justifies reading user mails because it says that when users sign up for a Gmail account and accept the 'Terms and Conditions', they have, in effect, agreed to Google's email policy.

In essence, Google is comparing itself with a postal service and using an old act, which says that senders of mails give up their right to privacy once they hand the letter over to a third party.

Android 5.0 could run on Linux 3.10

The Android 5.0 Key Lime Pie operating system is going to be launched sometime this year. While we all know that the Android OS runs on the Linux kernel, we never take the time to wonder how with each new version of Android, there is also a new version of Linux being used. Google's next take on the Android OS could work on the Linux 3.10 kernel.

First, a reader must know that not only does Android run on the Linux kernel, it runs on an undisturbed Linux kernel, that is, without any changes being made to it. When the Gingerbread flavour of Android was released, a lot of issues were fixed, including the major battery problem (to whatever extent it could be fixed). This OS ran on the greying Linux 2.6 kernel. Next up was Ice Cream Sandwich, which ran on the Linux 3.0 kernel. The newest and perhaps tastiest Jelly Bean OS runs on version 3.4 of the Linux kernel.

An Android, iOS app for the Delhi Metro!

Technology is surely making the life of travellers easier! And not only for those

An app to help you report sexual harassment within seconds

Whoever said 'Justice delayed is justice denied' knew the importance of time! And so a smartphone app has been created that can report sexual harassment in a matter of seconds. Launched in New York, the application allows people to send information about such incidents to the City Council and the City mayor's office. It reports the when, where and how of the incident to the authorities.

Moreover, the information sent to the authorities is sent anonymously. The compilation of all the information is then put on a map of New York City, showing where such incidents have been taking place more often. The areas where such incidents have been reported are marked with a purple flag.

This app will give the authorities the chance to analyse the true scope of street crimes such as harassment. As a result, it will help them enforce law and order in a more efficient manner. While the app has currently been launched only in New York, it should come up in other places too, soon. Such an app might prove useful in Indian cities too.

Over 15 years
experience in

**PERL APPLICATION
DEVELOPMENT
USING THE LAMP STACK**
(Linux, Apache, MySQL and Perl)

- Automation using Perl on a variety of platforms including Windows, Linux, AIX, HP-UX and Mainframes
- Design, implementation and maintenance of data driven web applications using MySQL, Apache and Mod_Perl
- Expertise in systems relating to document creation, document management and document printing (PDF, PS, PCL etc.)

Our US Customers Include:

- Charles Schwab
- Liberty Mutual
- Merrill Lynch
- Morgan Stanley
- State of California and many others.

Our Indian Customers Include:

- Angel Broking
- India Infoline
- Edelweiss
- Motilal Oswal and many other financial clients.
