

```

textbackground(BLUE);
textcolor(WHITE);
clrscr();
printf("Hello, World!\n");
getch();

```

```

return 0;
}

```

See how short *test.c* is compared to Code 2!

Now, to compile this code,

- 1) Keep both *conio.c* and *conio.h* in the same directory where *test.c* exists.
- 2) Compile using the following command:

```
gcc test.c conio.c -o test
```

Now, you can use *conio.c* and *conio.h* for any program.

Try it out

Create a program especially using *gotoxy(x,y)* to input a table and print it with different colours.

Copy *conio.h* into */usr/include* to use with *<conio.h>*.

h> instead of "*conio.h*". Create a shared library from *conio.c* (.so extension) and find its usage.

You may also try to create a ready-to-install package. **END** 

Disclaimer

These escape codes and tricks are given to help readers and are tested with *gnome-terminal*, *xterm* and *Linux tty* text console. But incompatibilities may occur. So always use a graphical console like *GNOME Terminal*, which can be closed easily with the mouse and keyboard when you notice improper working. Amateur hacking can destroy a system, for which the author is not responsible. So always be careful.
