

Escan | Mumbai

With eScan for Linux, users get a Linux style interface optimised to deliver real-time protection from sophisticated Internet-based threats without any significant impact on performance. To ensure security from malware targeting Android devices, eScan has specially designed a security solution, eScan Mobile and Tablet Security for Android. The technology used in eScan Mobile Security for Android protects devices against evolving security threats, thus ensuring uninterrupted usage.

ESET India | Navi Mumbai

ESET NOD32 Antivirus for Linux offers complete protection against cross-platform and emerging threats. Built on the award-winning ThreatSense scanning engine, the solution delivers real-time protection without system slowdowns, shielding Linux-based systems from all types of malicious code, including those engineered for Windows and Mac OS. The key benefits include proactive protection, cross-platform security, a low system footprint, advanced antivirus protection, etc. ESET NOD32 Antivirus 4 Business Edition for Linux Desktops comes with the possibility to create a pre-configured RPM installer package, compatible with software distribution tools.

F-Secure India | Hyderabad

F-Secure Mobile Security (for Android) protects you against viruses, spyware, hacker attacks and identity theft when you are online. It also keeps you safe from harmful websites and malicious applications, and allows you to moderate your children's online activities. An anti-theft feature helps you locate, lock or erase the contents of a missing mobile device. This is a complete security suite for your Android device, with award-winning technology to protect you against all online threats.

F-PROT | Iceland

Version 6 of F-PROT Antivirus for Linux is a new, significantly enhanced version that incorporates version 4 of the F-PROT Scanning Engine, which has been updated considerably compared to the previous version. F-PROT Antivirus for Linux now also supports both 32-bit and 64-bit versions of Linux x86. Due to major changes, the use of many F-PROT subsystems has been changed in addition to normal upgrades. F-PROT Antivirus for Linux Workstations utilises the renowned F-PROT Antivirus scanning engine for primary scans; in addition, it has a system of internal heuristics devised to search for unknown viruses.

Kaspersky Labs | Navi Mumbai

Kaspersky Endpoint Security for Linux provides corporate networks running UNIX-based operating systems on their endpoint machines with centralised protection from all types of malware and potentially dangerous programs. Kaspersky Lab's innovative new antivirus engine uses cutting-edge component architecture to increase performance and stability, providing reliable protection that's easy to control and manage. Kaspersky Anti-Virus for Linux File Server provides superior protection with Samba server integration and other features that can protect workstations and file servers in even the most complex heterogeneous networks. It is also certified VMware-ready and supports current versions of FreeBSD for integrated, future-proof protection.

McAfee Software India | Bengaluru

McAfee VirusScan Enterprise for Linux delivers always-on, real-time antivirus protection for Linux environments. VirusScan Enterprise for Linux was named a VB100 award winner for 100 per cent detection of 'in the wild' test samples, plus zero false positives in a selection of clean files. With the McAfee ePolicy Orchestrator (ePO) platform, you can efficiently deploy and manage your Linux clients on your network, giving you better security visibility across the entire infrastructure. It allows control policy configuration, deployment, and reporting for all your endpoints from ePO's single, Web-based console.
