

has a unique video streaming app called Sony Liv, using which consumers can enjoy catching up on TV shows like SAB, Sony Entertainment and Max. Sony remains focused on bringing truly differentiated devices and experiences to its customers. The Xperia smartphones combine stand-out design and superior entertainment technology with the powerful performance that consumers would expect from a Sony smartphone. Sony's current product portfolio includes smartphones such as Xperia E Dual, Xperia E, Xperia Z, Xperia ZL, Xperia SP, Xperia L and the recently launched Xperia Z Ultra.

Swingtel Communications | Mumbai

Swingtel Communications is a high end technology solutions company, with its exclusive design centre in Virginia, USA. Swingtel differentiates its product offerings with a high level of performance engineering, combined with stylish looks to offer affordable smartphones with the latest specs, features and Android version. Centralised service centres in Mumbai ensure better customer service. Its product portfolio includes 3G convergence devices ranging from 8.99 cm (3.5") dual SIM smartphones all the way to 17.78 cm (7") SIM-based calling tablets.

Swipe Telecom | Pune

Swipe Telecom differentiates itself through superior customisations to the UI, adding amazing functionality to its devices. Swipe has been pioneering breakthroughs in technology right from its inception. At a time when leading manufacturers ignored phablets, Swipe introduced newer and improved tablets and phablets. Swipe introduced India's first 3D tablet PC - the Swipe 3D Life. According to the company, it is officially the No 1 tablet manufacturer in the state of Rajasthan, No 2 in Mumbai, and a leading player in the states of Punjab, Gujarat and Madhya Pradesh.

WickedLeak | Mumbai

The company looks to differentiate itself with respect to hardware specs, design and also be the first to market with the latest hardware features. Running Android helps it focus its resources on the hardware front and not to worry about software. The company looks to get more and more Indian Android wizzkids to develop ROMs for it through various forums online. This has been the firm's online strategy since its inception.

Xolo | New Delhi

To differentiate their product offerings, a majority of the players have built UI layers above vanilla Android. But Xolo has consciously left out UI customisation, and instead is focusing on deeper framework changes, which can enable the user to manage the device better. A few of the ardent fans of Xolo are active contributors to open source. The company has a dedicated set of engineers, who interact with these users and help them in porting custom ROM or with Android tweaks like rooting. Xolo intends to bring about a superior user experience via hardware and software. The company was the first in the world to launch the Intel Medfield-based smartphone.

Zync Global Pvt Ltd | Noida

At Zync, the experts strive hard to deliver a product that has the latest technology so as to fulfil the needs of a technology-obsessed generation. Android, being open source software, gives the firm a lot of potential to offer bundled games, and software that are pre-installed to ensure a better user experience. Zync's products offer the flexibility of touchscreens as well as keypads to consumers new to the techno world, along with the best operating systems for a technology-driven society.
