

The Raijin supercomputer runs on 57,472 cores (Intel Xeon Sandy Bridge 2.6 GHz), 160 terabytes of main memory, Mellanox FDR interconnect, 10 petabytes of usable fast file system, and runs the OneSIS cluster manager along with the PBS Pro workflow manager. The supercomputer is good to process and analyse the huge data collected for purposes like climate research, water management and weather mapping.

You can own an open source airplane for just \$15,000

Yes, you read it correct. Buying an airplane is no more a distant dream, thanks to open source technology. From your smartphone to an airplane, open source technology is possibly running it all and making everything cost-friendly too. So, now you can buy an airplane for \$15,000, which is almost equivalent to the cost of 10 MacBook Pros. Isn't that interesting?

The Maker Plane team has made the aircraft technology 'cheaper' than ever. With the backing of a crowd-funded open source initiative, the team is now designing a light sport aircraft that will be good to fly two people. The best part of the aircraft is its price. If the project interests you, you can buy it for \$15,000.

The Maker Plane team is using all possible technologies to make the aircraft light and cheap, including composite body parts and 3D-printed components. Other more complex parts like radios and air data computers have to be sourced by the builders. The aircraft is also likely to include an anti-collision system.

IBM launches PowerLinux server for analytics, cloud computing and Big Data

IBM has come up with a 'superpower' in its high-performance PowerLinux server, to cater to its clients in Big Data, cloud computing and analytics. The firm has also designed new software and middleware apps to address the mounting computing requirements in the open cloud environments. The new PowerLinux 7R4 server, which is built on top of the Power Systems platform that runs IBM's Watson Cognitive Computing solution, will offer the data-intensive workloads installed in Linux environments.

The server is a sophisticated addition to the IBM's Power Systems server and is designed to run the industry standard Red Hat and SUSE Linux flavours. The

LinkedIn rolls out update for Android for instant job application

So, you came across a new job offer while browsing through LinkedIn from your phone and could not directly apply for it? Here comes a new LinkedIn update for Android and iOS that allows you to apply for a job directly from your mobile phone.

This feature is likely to benefit more than 30 per cent of members who check job listings on various social networks using their mobiles. Users applying for jobs now do not need to attach resumes, when applying from mobile phones, but just have to forward their LinkedIn profiles. LinkedIn decided to offer this feature considering the fact that a large number of users find it difficult to manage and edit their resumes on the small screen.

In order to use this feature, look for a job or choose the one from the personalised recommendations list. Click on the 'Apply' or 'Save Job' button. You can review your LinkedIn profile by clicking on the 'Apply' button, and then get an option to edit it directly from the app before submitting it. If it's already updated, you just need to click on 'Next'. On doing this, you will be asked to confirm your email ID and phone number. Once you do that, you can click on the 'Submit' button. The feature is being introduced in English for LinkedIn users on Android and iOS all across the globe. The update will also be introduced soon. Those interested in it can download LinkedIn for Android from Google Play and LinkedIn for iOS from the App Store.

Over 15 years experience in
**PERL APPLICATION
DEVELOPMENT
USING THE LAMP STACK**
(Linux, Apache, MySQL and Perl)

- Automation using Perl on a variety of platforms including Windows, Linux, AIX, HP/UX and Mainframes
- Design, implementation and maintenance of data driven web applications using MySQL, Apache and Mod_Perl
- Expertise in systems relating to document creation, document management and document printing (PDF, PS, PCL etc.)

Our US Customers Include:

- Charles Schwab • Liberty Mutual
- Merrill Lynch • Morgan Stanley
- State of California and many others.

Our Indian Customers include:

- Angel Broking • India Infoline
- Edelweiss • Motilal Oswal and many other financial clients.
