

Do these findings hold any significance for the engineering and design communities? They probably reveal how engineers' views about open source are changing.

BeagleBone and Arduino were predominately restricted to hobbyists earlier, but now, professional engineers as well as students are using them. The gap is reducing across these groups, signifying how technology is influencing and increasing design platform choices.

Ubuntu launches Lock Screen app for Android

Canonical revealed its mobile phone with the good looking interface nearly eight months ago. Recently, the company launched an Ubuntu Touch Styled Lock Screen app for Android.

The app has been designed by a developer at the XDA Developer forums. It is available for free download for Android phones running 2.1 or higher from Google Play. Although it does not bring Android into Ubuntu's mobile system, it does add a certain glamour and functionality to the phone with features that include swiping the screen to the left to open the phone, animated info-graphics, SMS and missed call notifications, lock-screen security, on-screen music buttons, customisable user name and time, date and alarm information, etc. The Ubuntu lock screen app is the first of its kind for Android users. The app is simple to use and has the elegance and style of the Ubuntu Touch OS. It has many settings that can be altered. These range from animations to colours. Although the app is still at the beta stage, it is stable for everyday use. The app is available in Spanish, English, Dutch, Turkish, Portuguese and Italian.

Now any media can be Chromecast, courtesy CyanogenMod

While developers at Google are working hard to bring out new ways to make the Chromecast even better, CyanogenMod has announced a new support system for it, which will allow any format of media on an Android device to be cast onto the TV. Chromecast is Google's recently launched USB-based dongle that helps connect Google apps and services to any size of screen, particularly TVs.

Koushik Dutta, the developer who had earlier created apps to cast local media files from the Android gallery onto the TV (which made it possible to cast media files from Dropbox) has now made this application to cast any media via Chromecast, and the team has now made it an official version.

CyanogenMod says that the support is quite simple and will allow anything to be beamed onto the TV easily.

Since its launch, the Chromecast has been a huge success despite some current limitations. The US\$ 35 device can be used to stream media from a laptop, mobile and tablet, to the TV. And it also allows you to browse your device's applications.

As of now, Netflix and YouTube are the only two supported applications that

RHCA

(Red Hat Certified Architect)

ASSURED Exam Dates @ IPSR

**Winner of
Best
Red Hat
Certified
Training Partner
Award
2011-12**
(India, Bangladesh, Sri Lanka & Nepal)

RHCA RHCDs RHCSS RHCVA RHCE

**Modules Starting
Every Week**

Awards

- Winner of Red Hat International Award 2008, 2009, 2010, 2011 & 2012
- Winner of Red Hat GLS National Awards 2004, 05, 06, 07 & 08

Faculty & Infrastructure

- 27 member faculty crew led by RHCE, RHCVA, RHCSS, RHCDs certified professionals
- Global standard infrastructure offered at our International Centre located in Kochi

Achievements

- Produced 5000+ Red Hat professionals
