

and render them on the devices using *openGLES* with this library. Adding animations like rotation, or scaling on user events is a cakewalk.

Universal Image Loader

Handling large bitmaps has given nightmares to many Android developers. This lightweight library saves you the effort of handling bitmaps and provides great support for caching images. One can easily figure out how to decode the bitmaps in the app. Definitely a lifesaver of a library.

Website: <https://github.com/nostra13/Android-Universal-Image-Loader>

Robotium

This is an automation testing framework for Android. Developers and testers can generate test cases and ensure that minor changes do not introduce new bugs. It might seem to be an overhead in the early stages of development but helps keep maintenance work easy.

robotium/

ZXing

This quickly adds support for scanning bar codes in an Android application. Easy to configure and use. It has a high scanning efficiency.

Website: <http://code.google.com/p/zxing/>

Tesseract

Tesseract is a highly optimised optical character reader library available for Android. This is a cross-platform library and will require some basic knowledge of using *NDK* in an Android app.

Website: <http://code.google.com/p/tesseract-ocr/>

ACHartEngine

This plots neat and elegant graphs in various styles. The *javadocs* might not be great, and it might not be all that easy to develop with only a few resources available and a large number of classes, but the output is definitely worth the effort.

PEEDI JTAG Debugger

(Powerful Embedded Ethernet Debug Interface)

PEEDI is an Embedded ICE solution that enables you to debug software running on ARM, CORTEX-M0 /M3/M4/A5/A8/A9, PowerPC, XScale, Coldfire, Blackfin, AVR32, MIPS32 processor cores via the JTAG/BDM/SWD port. PEEDI provides the services needed to perform all debugging operations.

Key Features:

- Wide Processor support: ARM, Cortex, PowerPC, XScale, Coldfire, Blackfin, AVR32, MIPS32 etc.
- Multi Core support
- Linux Kernel and applications debugging
- OS awareness - "info threads" support for many OS: Linux, uClinux, eCos, ...
- Blackfin virtual memory support - enables a linear programming and access to a device that is bigger than the visible external asynchronous memory space
- Built in FLASH Programmer (can be used as a Standalone FLASH programmer without host)
- Front panel interface: 2 buttons and 7 segment LED
- Ability to route the RS232 of the PEEDI to a TCP/IP port
- Ability to route the ARM7/ARM9/ Cortex-M3 DCC to a TCP/IP port
- Economical

WARRANTY:
Hardware 3 Years;
Software 1 Year
