

Figure 1: SSO-Initial Login process

and will not redirect the user to the login page if the token is valid and has not expired.

Setting up the OpenAM server

OpenAM server runs under Tomcat as a Web application. Install Tomcat and download OpenAM_10.0.0.war from <http://forgerock.com/openam.html>. Copy OpenAM_10.0.0.war to the Tomcat Web apps directory. Access the OpenAM server URL (<http://example.OpenAM.com:8080/OpenAM>). First time access will take you to the OpenAM configuration steps. Configure OpenAM with the default directory server or the directory server in which you have user information.

Setting up the OpenAM agent

Create an agent profile in the OpenAM server for the agent, and download the appropriate agent installer from <http://forgerock.com/OpenAM.html>. Run the agent installer on the Web server in which you want to protect the resources. Configure the agent with the OpenAM server and agent profile details. After successful installation, a request to the Web server without an SSO token will be redirected to OpenAM server.

Platforms supported

OpenAM server can be installed on RHEL 4/5/6, Ubuntu,

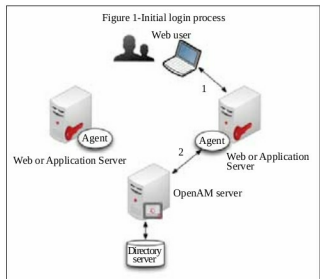

Figure 2: SSO-Subsequent access

Solaris, Windows Server 2003 and Windows 2008 Server. Agents are available for Tomcat, Weblogic, Jboss, Glassfish and Oracle Application Server 10g.

Benchmark result

Kiran Ramineni published this benchmark result in the OpenAM mailing list. (<http://lists.forgerock.org/pipermail/openam/2012-June/006676.html>)

	# of logins supported in a minute		
OpenAM/J2EE container	Tomcat	JBoss	Glassfish
OpenAM 9.5.2	10351	10481	9332
OpenAM 10	15956	15364	13910
