

Samsung's new Galaxy Tab 3 series

Samsung has launched the Galaxy Tab 3 311 (20.32 cm/8-inch screen) and Galaxy Tab 3 211 (17.78 cm/7-inch screen) in India. The Galaxy Tab 3 series provides consumers with various ways to view, listen, create and share meaningful events and special content.

Samsung Galaxy Tab 3 311

The Samsung Galaxy Tab 3 311 is available in two variants with 3G (voice and data) capability.

Equipped with a 20.3-cm (8-inch) WXGA display (189 ppi), it comes with a resolution of 1280 x 800. With a depth of just 7.4 mm, this slim device is comfortable to hold and light to carry around. It runs on the latest Android Jellybean 4.2 and packs a powerful 1.5GHz Dual Core processor with 1.5 GB of RAM.

The tablet offers the 'Multi Window' feature that allows the user to work on two apps simultaneously by splitting the screen into two (like watching a movie and chatting at the same time). Another feature called 'Pop-up Video' allows a small video window to be played over any part of the Tab's menu, while the 'Smart Stay' feature tracks the user's eyes to keep the screen on for only as long as it is being watched. 'Reading Mode' technology optimises the display to deliver the perfect illumination and tone for comfortable paper-like readability in a variety of lighting conditions. These features together add to the 'smartest screen experience' amongst tablets. It is packed with a 5 MP rear camera, 1.9 MP front camera, and has 16 GB internal memory that can be expanded by up to 64 GB with a MicroSD card. The device also sports a powerful 4450mAh battery.

Samsung Galaxy Tab 3 211

This tablet sports a 17.7-cm (7-inch) WSVGA display (168 ppi) and has a compact, one-hand grip form factor, which means that users can hold it comfortably for hours as well as store it in a pocket or small bag for reading and entertainment while on the go. The sleek and stylish design encompasses a thinner bezel than the previous Galaxy Tab 2 (17.7 cm). Powered by a 1.2GHz Dual Core processor and 1 GB of RAM, the device allows for faster downloads and sharing, while providing easy access to videos, apps, games, and the Web, as well as supporting the smart screen feature of 'Pop-up Video' available on the Tab 3 311. It packs in 8 GB of internal storage that can be expanded by up to 32 GB, and a powerful 4000mAh battery. It comes with a 3-MP rear camera and a 1.3-MP front camera. Combined with the latest Android 4.1 (Jelly Bean), it allows users to share photos, videos and life's special moments through a few quick taps and swipes.

What both tablets offer

The Tab 3 series comes preloaded with a bouquet of services like 'My Education', 'My Offers', 'My Games', 'My Music' and 'My Movies'. 'My Education' gives consumers access to 2000 e-books, 1000 learning videos, educational content for school children, and preparatory material for entrance exams to professional courses. 'My Offers' makes available, at the click of a button, the best local offers from 350+ brands and 25000+ merchants in India. Twenty-five edutainment games and 20 HD games are available for users to download on the Tab 3 series.

The 'My Music' application gives users access to 500,000 Bollywood and international songs, while 'My Movies' allows Tab 3 users to stream trailers, videos and movies from over 2000 selected catalogues. As an introductory offer, the company is also making available a digital wallet of up to Rs 20,000 free for Tab 3 users to access and buy paid content from the Samsung mobile application store.

Pricing

The MRP of the Galaxy Tab 3 models being launched in India is as follows:

Tab 3 211 (17.7 cm/7-inch): Rs 17,745

Tab 3 311 (20.3cm/8-inch): Rs 25,725

Tab 3 310 (20.3 cm/8-inch, Wi-Fi only): Rs 21,945

The Samsung Tab 3 series comes with an introductory offer of 2 GB/month data, free for two months from Vodafone. The offer is valid on the post-paid platform. With the launch of the Tab 3 series, Samsung now has a range of five tablets, which are available in the price range of Rs 17,745 and Rs 38,840.

phenomenally well both globally as well as in India. We have very high aspirations with Galaxy S4 and it continues to deliver results accordingly. So I would not say Galaxy S4 is not doing well in the market. If I compare S4 with S3, I think S4 has grown much above where S3 was.

Q: You had launched a few Windows 8 devices some time back. How were they received in the market?

Quite frankly, we work on the basis of customer feedback.

We work on several platforms including Windows, Android and Bada. But the reality is that, right now, Android is the preferred platform in the market. With over 70 per cent market share, Android is the clear choice among customers and we are addressing that audience. So, going forward, if customers want Windows Phone devices, we will give these to them. Right now the reality is different and there are very few takers of Windows Phone devices in the market.
