

Pep Up Your Device with Paranoid Android

Paranoid Android is one of those rare innovations to have come out of open source software that thoroughly reinvents the way software is designed. With features like Hybrid UI, Pie Controls and the recently released HALO multitasking interface, this custom ROM for Android can reinvent your Android device like never before.

When asked about the leading Android custom ROM, the first name that comes to mind is undoubtedly Cyanogen Mod. The kind of features that it brings to the table, along with its rapid development and updates that are available almost instantly, make it the only custom ROM that most people use. But there are just a few that can match Paranoid Android for innovative design and unique features. Though not available for every Android device in the market, it is one of the few powerful Android ROMs that takes customisation to a whole new level. While Cyanogen Mod focuses on improving the overall experience and adding useful features to the stock Android interface, Paranoid Android focuses on bringing out features like the Tablet and Phablet UI on the smartphone, Per App DPI and the revolutionary HALO interface. The hybrid engine, which

forms the heart of this ROM, attracts enthusiasts and developers alike. However, the best part is that it is open source and quite a few features are shared between the developers of these ROMs. This product of open source development can be shown off as an example of the freedom that the Android eco-system provides.

As mentioned earlier, quite a few features have been adopted from other sources or are restructured third party apps. This allows developers to advance things that are already popular and avoid re-inventing the wheel. For instance, take Pie Controls, which has now been included in Cyanogen Mod as well. This was originally developed by the Paranoid Android team and was in turn inspired from a somewhat similar feature in the stock Android browser. The new HALO notification system is borrowed from Facebook Messenger's Chat Head feature. This shows
