

A Successful Start-up That Chose To Go the Open Source Way

What does it take to get a start-up going? Well, nothing much; just a great idea, a few devoted professionals and, of course, funds. Helical IT Solutions seems to have them all. A company that started its operations in November 2012, it has already earned funds from an international investor and is poised to grow in a domain where growth is almost guaranteed—open source technology.

Helical IT Solutions Pvt Ltd deals with Data Warehousing and Business Intelligence (DWBI). The founders of the company, Nikhilesh Tiwari and Nitin Sahu, chose the open source way because they are sure that if there is any domain in which growth is

guaranteed, it is in open source technology. The range of services provided by the company include data warehousing, data visualisation, BI, ETL (extract, transfer and load), mobile and self-services BI, geographical charting, etc.
