

- **Overview:** Joget is an open source platform for developing enterprise web apps.
- **Features:** Visual development, process automation, cloud support.
- **Pros:** Enterprise-level features, highly customisable.
- **Cons:** Complex setup; may require technical knowledge.
- **Use cases:** Business process management, enterprise applications, workflow automation.

Directus

URL: <https://directus.io/>

- **Overview:** Directus is an open source tool for managing database content.
- **Features:** Headless CMS, API-first, role-based access.
- **Pros:** Flexible; supports various databases, strong API.
- **Cons:** Not a full no-code platform; requires database setup.
- **Use cases:** Content management, database management, backend for apps.

OutSystems

URL: <https://www.outsystems.com/>

- **Overview:** OutSystems is a low-code platform for enterprise-grade

applications.

- **Features:** Full-stack development, AI assistance, cloud deployment.
- **Pros:** Robust features, good scalability.
- **Cons:** Higher cost, more complex than pure no-code.
- **Use cases:** Enterprise applications, complex workflows, mobile apps.

Mendix

URL: <https://www.mendix.com/>

- **Overview:** Mendix is a low-code platform that supports no-code development.
- **Features:** Visual development, reusable components, cloud integration.
- **Pros:** Strong support, flexible deployment.
- **Cons:** Can be costly, may require some coding for complex apps.
- **Use cases:** Enterprise applications, rapid prototyping, mobile and web apps.

Cortez

URL: <https://cortezaproject.org/>

- **Overview:** Cortez is an open source platform for building business applications.

- **Features:** Workflow automation, CRM, customisable modules.
- **Pros:** Open source, community-driven, flexible.
- **Cons:** Smaller community, less polished interface.
- **Use cases:** CRM, business process management, custom business apps.

Internal.io

URL: <https://internal.io/>

- **Overview:** Internal.io is a platform for building internal tools quickly.
- **Features:** Pre-built templates, API integrations, user permissions.
- **Pros:** Easy to use, fast setup, good integrations.
- **Cons:** Limited to internal tools, not suitable for public-facing apps.
- **Use cases:** Internal dashboards, admin tools, data management.

By choosing the right no-code open source platform, businesses can streamline their development processes, reduce costs, and empower non-technical users to create functional applications.

Performance and scalability

- **Appsmith:** Generally performs well for small to medium projects. May

Feature comparison table
