

developers with limited ML expertise to train high-quality models.

AutoML Vision: Enables custom image classification and object detection models.

AutoML Video Intelligence: Trains models for video classification and object tracking.

AutoML Natural Language: Helps with custom models for text classification, sentiment analysis, and entity extraction.

AutoML Translation: Builds custom translation models for specific language pairs.

AutoML Tables: Trains ML models on structured data.

▪ **Vision AI**

This comprises tools for deriving insights from images and videos using powerful ML models.

Cloud Vision API: Has image recognition and understanding capabilities.

Video Intelligence API: Enables video analysis for detecting objects, actions, and scenes.

▪ **Natural Language AI**

This offers services for analysing and understanding text.

Cloud Natural Language API: Helps with text analysis, including sentiment analysis, entity recognition, and syntax analysis.

AutoML Natural Language: Enables custom text classification and entity extraction models.

▪ **Translation AI**

This is a service for translating text between languages.

Cloud Translation API: Enables fast and dynamic translation services.

AutoML Translation: Trains custom translation models for specific domains.

▪ **Dialogflow**

This is a platform for building conversational interfaces and chatbots.

Dialogflow CX: Offers advanced

conversational capabilities for complex use cases.

Dialogflow ES: This is a basic version for simpler chatbot applications.

▪ **Speech-to-Text**

This service helps convert spoken language into written text with high accuracy. The **Cloud Speech-to-Text API** enables the transcription of audio with support for multiple languages and custom vocabularies.

▪ **Text-to-Speech**

This converts text into natural-sounding speech. The **Cloud Text-to-Speech API** enables various voices and languages to synthesise human-like speech.

▪ **Recommendations AI**

This service enables personalised product recommendations tailored to individual users. It is a real-time recommendation engine for e-commerce and content platforms.

▪ **AI Hub**

This centralised repository is for sharing and discovering AI components. It's a collaborative platform to share and find AI pipelines and components.

▪ **AI Building Blocks**

This service offers pre-trained ML models to quickly add AI capabilities

to applications.

Vision AI: Pre-trained models for image and video analysis.

Natural Language AI: Pre-trained models for text analysis.

Translation AI: Pre-trained models for language translation.

▪ **Deep Learning VM Image**

Pre-configured VM images optimised for deep learning are offered by this service. These VMs have pre-installed ML frameworks and tools.

▪ **TensorFlow Enterprise**

This GCP service offers enterprise-grade support and tools for TensorFlow, including optimised TensorFlow runtime and long-term support.

These AI services from Google Cloud Platform provide powerful tools for developers to incorporate advanced machine learning and AI capabilities into their applications, offering both pre-trained models for common use cases and customisable models for specific business needs.

To sum up, the cloud-based AI services offered by Microsoft, Amazon and Google enable businesses to align their infrastructure with their requirements. The good thing is that they are cost efficient and help organisations stay in touch with the evolving tech. **END** 🐼
