

QORIX joins Eclipse Foundation's SDV Working Group

QORIX has joined the Software Defined Vehicle (SDV) Working Group at the Eclipse Foundation, which highlights its commitment to advancing software-defined vehicle technologies amid growing software complexity in the automotive industry.

The automotive industry is moving towards software-defined vehicle (SDV) design, which offers faster time-to-market, new revenue streams, and innovative service models. The SDV Working Group supports this transition by providing a platform for collaboration on open source software for in-vehicle and around-the-vehicle systems, including enhanced in-cabin experiences. This open source foundation model promotes flexibility, agility, and cost-efficiency.

By joining this group, QORIX aims to improve automotive safety and connectivity. “We are excited to join the SDV Working Group of the Eclipse Foundation and collaborate with industry leaders,” said Markus Schupfner, CEO of QORIX. “Our participation will leverage open source innovation, accelerate the development of advanced solutions, and drive industry transformation.”

“We welcome QORIX to both the Eclipse Foundation and the Software Defined Vehicle Working Group; with their specialised expertise in middleware for functional safety and deterministic applications, we look forward to productive collaboration in delivering the automotive industry’s most advanced open source software stack.” said Mike Milinkovich, executive director at the Eclipse Foundation.

Sysdig expands operations in India

Sysdig is reaffirming its commitment to the Indian market by expanding its operations and deploying its cloud-native application protection platform (CNAPP) via a localised AWS data centre.

Commenting on what propelled the move, Gavin Selkirk, general manager, APAC and Japan, Sysdig, told *OSFY*, “India is becoming a DevOps and DevSecOps country from a technology standpoint. Companies like AWS, which is our cloud partner, host our environments. Andy Jassy got it quicker than anyone, investing billions here 10-12 years ago. It’s clear why our organisation is investing in this wonderful market.”

Skyflow appoints Neha Jamwal as APAC demand generation lead

Skyflow, a data privacy company, has appointed Neha Jamwal as the demand generation lead for the APAC region.

Jamwal will build and lead a marketing team that develops initiatives tailored specifically for the APAC region to build consumer trust and adopt data privacy solutions in a market that is currently witnessing rapid digital transformation and increased regulatory requirements.

Jamwal has previously worked as the senior marketing manager (APAC) for Neo4j, a graph database management system. Her other work experiences include Cloudera and Trend Micro, establishing her as an experienced professional in the data and analytics industry with a strong background in B2B marketing, field marketing, ABM (account-based marketing), digital marketing, channel management, and partner engagement.

Skyflow’s solutions focus on protecting personal and financial data by leveraging advanced encryption, tokenisation, and access controls. They are designed to comply with data privacy regulations like GDPR, CCPA, and HIPAA, ensuring businesses can manage data privacy efficiently and securely. These solutions cater to various industries, including healthcare, finance, and technology, offering APIs and tools to integrate data privacy features seamlessly into existing workflows and applications.

Jamwal will utilise her expertise in technology-driven marketing to expand the reach of Skyflow’s data privacy solutions in the APAC region to help businesses securely store, manage, and share sensitive customer information.
