

Pros

- Integrated approach to EA, BPA, and GRC
- Strong analytics and reporting capabilities
- Flexible deployment options

Cons

- High cost of ownership
- Steep learning curve
- Complex configuration and setup

- **Planview Enterprise One**

Planview Enterprise One focuses on enterprise portfolio management, integrating project management, resource management, and financial management. Enterprise One is designed to provide a holistic view of the enterprise portfolio, enabling organisations to optimise resource allocation, prioritise investments, and achieve strategic objectives. Planview Enterprise One is a cloud-based solution that integrates with various ERP and PPM systems, providing a cohesive IT ecosystem. Its web-based interface allows for easy access and collaboration across distributed teams.

Pros

- Comprehensive portfolio management capabilities
- Strong integration with other enterprise systems
- Good financial planning and analysis tools

Cons

- Expensive for smaller enterprises
- Complex to implement and configure
- Requires significant training for effective use

- **IBM Rational System Architect**

IBM Rational System Architect is a well-established tool in the enterprise architecture space, and supports various frameworks and standards, including TOGAF, DoDAF, and BPMN. The tool is designed to provide

a comprehensive view of the enterprise architecture, enabling organisations to manage complexity, improve decision-making, and align IT with business goals. The latest version, Rational System Architect 2024, includes enhanced modelling capabilities, improved performance, and expanded integration options. The tool integrates with other IBM products, including IBM Rational DOORS and IBM Rational Team Concert.

Pros

- Extensive support for multiple frameworks
- Strong modelling and analytical capabilities
- Good integration with other IBM tools

Cons

- High cost
- Steep learning curve
- Interfaces can be outdated and complex

- **Ardoq**

Ardoq is a modern tool designed to support dynamic and collaborative enterprise architecture and digital transformation initiatives. The tool supports various modelling languages and frameworks, including ArchiMate and BPMN. Ardoq is designed to facilitate collaboration across teams that integrate with various IT management and development tools, including Jira, Confluence, and ServiceNow.

Pros

- Intuitive and modern interface
- Strong collaboration and visualisation features
- Flexible metamodeling capabilities

Cons

- Limited offline capabilities
- Can be expensive for large-scale use
- Some users find customisation options complex

- **LeanIX**

LeanIX is an enterprise architecture tool that emphasises simplicity and ease of use, making it ideal for companies seeking quick and effective EA solutions. The tool supports various frameworks and standards, including TOGAF and BPMN, and offers robust capabilities for application portfolio management, IT portfolio management, and cloud governance.

Pros

- User-friendly and intuitive
- Strong integration capabilities
- Quick to implement and use

Cons

- Limited advanced modelling features
- Higher cost for larger deployments
- May not suit very complex EA requirements

- **Erwin Evolve**

Erwin Evolve supports various frameworks and standards, including TOGAF, ArchiMate, and BPMN, making it suitable for a wide range of industries and use cases. It integrates with various IT management and development tools, including ServiceNow, Jira, and Confluence, enabling a cohesive IT ecosystem.

Pros

- Comprehensive feature set
- Strong integration capabilities
- Good support for various frameworks

Cons

- Can be expensive
- Steep learning curve
- Complex setup and configuration

Best practices in EA development

Align with business strategy: Ensure EA initiatives support organisational goals and adapt as business needs evolve. Engage regularly with leadership to understand priorities.
