

Continue with old technologies:

Relying solely on legacy and outdated technologies is a strict no-no. New, better options must be constantly explored.

Underestimate risks:

SAs must always consider potential risks and have mitigation strategies in place.

Not planning for failures:

The need for robust disaster recovery and backup plans must never be overlooked. CI/CD practices that ensure quick and reliable deployments must be adopted.

A software architect is not a one-man show. Also, software architecture is not the exclusive job of a CIO, CFO or CXO. It's everyone's job within an enterprise. The leaders in an organisation need to be actively involved when the architecture strategy is being defined. At the architecture implementation stage

all the stakeholders have a role to play and must contribute in some way.

Next-gen SAs must strive to be innovative, tech savvy, and agile minded. They must listen and

communicate, understand the needs of the team, and constantly learn and collaborate with the best to make a measurable impact on the business of an organisation. **END** 🐧
