

Fedora Asahi Remix 41 is now generally available

The Fedora and Asahi Linux projects have announced the general availability of Fedora Asahi Remix 41, the latest version of this distribution tailored for Apple Silicon Macs. Built on the Fedora Linux 41 operating system series, this release features the KDE Plasma 6.2 desktop environment as the default and introduces x86/x86-64 emulation with support for AAA games on Apple Silicon, thanks to the new conformant Vulkan 1.4 driver.

Fedora Asahi Remix 41 continues to enhance device compatibility for Apple Silicon Macs, offering extensive

support, including high-quality audio functionality right out of the box. It also

introduces a custom initial setup wizard, leveraging the Calamares universal installer for Linux. Users seeking alternative environments can opt for a GNOME variant, which comes with the latest GNOME 47 desktop environment series.

For those with specific use cases, Fedora Asahi Remix 41 includes a Server variant, ideal for turning Apple Silicon Macs into servers or other headless deployments, as well as a Minimal image for users looking to create a customised Fedora Asahi Remix experience. This release reinforces the project's commitment to delivering a versatile and high-performing Linux distribution for Apple's hardware.

Fedora Asahi Remix is currently supported on MacBook Air M1 and M2, MacBook Pro M1, M1 Pro, M1 Max, M2, M2 Pro, and M2 Max, Mac Mini M1, M2, and M2 Pro, Mac Studio M1 Max, M1 Ultra, M2 Max, and M2 Ultra, as well as iMac M1 devices. For more details, check out the official website.

environment, and the deprecation of both the i386 kernel/images and DSA keys in the SSH client.

Kali Linux 2024.4 also brings a host of new tools to enhance its capabilities. Among them are bloodyAD, an Active Directory privilege escalation framework; HexWalk, a hex analyzer, editor, and viewer; openssh-client-ssh1, a Secure Shell (SSH) client for the legacy SSH1 protocol; Proximoth, a tool for detecting control frame attack vulnerabilities; and Sara, a security inspection utility for RouterOS. Additionally, the release includes the Web Cache Vulnerability Scanner (WCVS), a Go-based CLI tool for detecting web cache poisoning; XSRFProbe, an advanced toolkit for auditing and exploiting Cross-Site Request Forgery (CSRF/XSRF); and Zenmap, a graphical frontend for Nmap.

With these updates and tools, Kali Linux 2024.4 continues to evolve as a robust platform for security professionals.

Among other noteworthy changes, Kali Linux 2024.4 adds Raspberry Pi Imager customisation support, adds Wifipumpkin3 as a Mana toolkit replacement for the Kali NetHunter app, updates the Kali NetHunter installer with full support for the Magisk installation method, and improves Raspberry Pi 5 support for a smoother graphical experience and improved detection for DSI displays and cameras.

Also worth mentioning for those who like to run Kali Linux on mobile devices is that Kali NetHunter now supports a total of 100 devices.

Red Hat awards CIMB Bank Malaysia for open source innovations

Red Hat, Inc., the world's leading provider of open source solutions, has announced CIMB Bank Malaysia as the winner of the Red Hat APAC Innovation

Awards 2024 for Malaysia. This recognition celebrates CIMB Bank's exceptional achievements in leveraging Red Hat solutions to meet evolving customer needs and drive innovation in the financial sector.

"Despite the uncertain economic conditions in 2024, we have seen the remarkable milestones achieved by our customers. This year, we

want to highlight the innovative strides of these organisations at the Red Hat APAC Innovation Awards 2024 as they leverage advanced technologies to drive business initiatives. Open source remains the key to help organisations uncover what is next and pave the way for success with the right tools and expertise," said Marjet Andriesse, senior vice president and general manager, APJC, Red Hat.

Reflecting this year's theme, 'Unlock what's next', the Red Hat APAC Innovation Awards honoured organisations that utilised open source technologies to achieve transformative outcomes. These awards highlight how enterprises can address rising infrastructure costs while adapting to evolving business demands. This year's awards recognised 31 winners across 11 countries, each demonstrating innovative use of Red Hat solutions to overcome challenges and deliver customer-focused solutions.

According to Red Hat's 2024 Global Tech Trends, key funding priorities for APAC businesses include developing cloud-native applications, enhancing digital user experiences, and accelerating the delivery of applications and services. These priorities are reflected in the awards' five categories: Digital Transformation, Hybrid Cloud Infrastructure, Cloud-Native Development, Automation, and Resilience.
