

A more detailed output of the returned packet can be viewed using the 'show()' method on the object as illustrated below:

[illegible]

Graphical dump

Using the `python3-pyx` package, we can dump the packet contents into a PDF file as shown below:

```
>>> p.pdfdump("/tmp/output.pdf")
```

The PDF image of the output is shown in Figure 1. The other output options available are tabulated below.

Command	Effect
p.psdump()	Output a PostScript diagram
p.json()	Return a JSON string representation of the packet
p.show2()	In addition to the show() command output, checksums are provided
hexdump(p)	A hexadecimal dump
raw(p)	The raw packet contents
ls(p)	The list of field values
ls.sprintf()	Use a format string with field values

Traceroute

The `traceroute()` function is in module `scapy.layers.inet` and can be used to trace a TCP route to a `www.google.com` server. For example:
