

solutions. Native tools are excellent for handling basic security tasks, such as blocking unauthorised access, while third-party tools excel in areas like real-time monitoring and threat detection.

A great example of this is integrating AWS CloudTrail and GuardDuty logs, which are cloud-native solutions, with Splunk, which is a third-party commercial solution for real-time monitoring.

Ease of management: Finally, ease of management is a critical consideration. In a fast-paced startup environment, simplicity and scalability are the key, so tools that are easy to configure and require minimal maintenance are preferred. Cloud-native tools often excel in this aspect. Mostly, larger organisations or those with complex security needs may opt for third-party tools, despite their higher

setup and maintenance requirements, because they offer more advanced features and customisation options.

The verdict

When it comes to cloud security tools, there's no perfect solution that suits every organisation. Because each organisation has its unique needs, skills, and regulations which must be considered.

Here's a mantra to follow: "Keep things simple." Solutions with advanced features can look attractive but tend to bring about unnecessary complications. Begin with easy-to-use, direct tools like cloud-native tools in the initial stages. Adopting this approach streamlines the

management of your cloud security. As our cloud security practices evolve and mature, choose tools that offer customisation to meet organisation's goals and requirements. In such cases, third-party commercial tools can be used.

Tools are meant to address your concerns, not add to them. If a tool flags a vulnerability, it doesn't mean you have to completely change your security plan to fix that one vulnerability. Think of tools as navigating with a map; you determine the destination, and the tools assist you in reaching it. Therefore, focus and spend more time on establishing your organisation's security goals and strategies, and using tools as a means to achieve those objectives. **END**
