

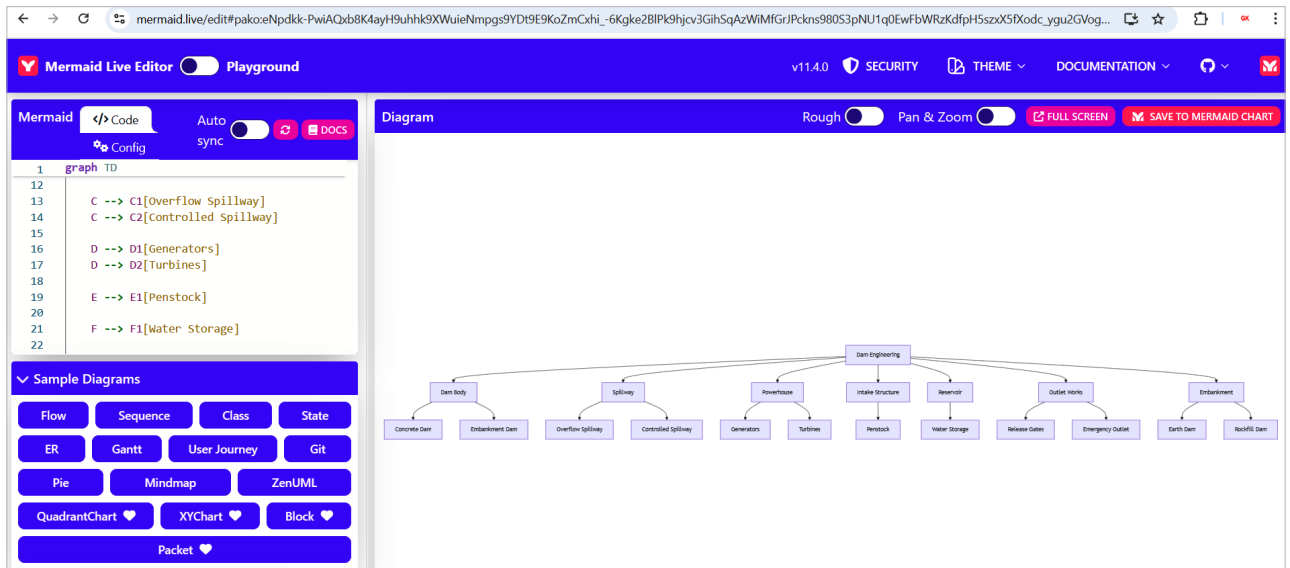

Figure 3: Diagram generated by mermaid.live from the script of ChatGPT

```

F --> F1[Structural Engineering]
F --> F2[MEP Design]
F --> F3[Interior Layout]

G --> G1[Technical Drawings]
G --> G2[Construction Specs]
G --> G3[Cost Estimation]

H --> H1[Building Permits]
H --> H2[Local Authorities Approval]

I --> I1[Construction Supervision]
I --> I2[Quality Checks]
I --> I3[Project Completion]
  
```

This method can be used to create any number of diagrams for different domains.

ChatPDF

URL: [ChatPDF.com](https://chatpdf.com)

ChatPDF is an AI chatbot using which we can extract deep content from a PDF document. For example, if a teacher wants to generate a question paper from the chapter of a book, this chapter can be uploaded in pdf format on ChatPDF. A prompt is then written to generate the relevant type of content like question paper, key findings, or any other.

A research scholar can upload a research paper in pdf format to ChatPDF and can ask it to generate a problem statement, future work, main findings or any other type of content related to that paper.

An AI chatbot like ChatPDF makes it very easy to write

literature reviews, analyse papers and carry out many other similar tasks for research analytics.

Perplexity

URL: perplexity.ai

Perplexity is another AI chatbot that can be used to generate content for academics and research, and is similar to ChatPDF. Using perplexity.ai, the content from uploaded documents can be extracted by asking questions.

Perplexity helps teachers in planning lessons, quiz and assignment creation, content summarisation, grading assistance, student support,
