

Vigil status page

The Monitoror single page monitor wall is quick but is suited only for a relatively smaller number of servers and services. Our next free and open source status page solution called Vigil is capable of handling a large number of servers and services with additional features like branding, alerting, announcements, etc.

Let's now see Vigil in action. Create *vigil_stack.yml* and *config.cfg* as shown below:

vigil_stack.yml

services:

```

vigil:
  image: valeriansaliou/vigil:${VGILTAG:-v1.27.0}
  ports:
    - "48080:8080"
  restart: unless-stopped

```

networks:

```

default:
  name: statuspage-demo
  external: true

```

config.cfg

[server]

```

log_level = "debug"
inet = "0.0.0.0:8080"
workers = 4
manager_token = "REPLACE_THIS_WITH_A_VERY_SECRET_KEY"
reporter_token = "REPLACE_THIS_WITH_A_SECRET_KEY"

```

[assets]

```

path = "./res/assets/"

```

[branding]

```

page_title = "Vigil Localhost Test Status Page"
page_url = "https://teststatus.page/status"
company_name = "RNG"
icon_color = "#1972F5"
icon_url = "https://avatars.githubusercontent.com/u/226598?v=4"
logo_color = "#1972F5"
logo_url = "https://avatars.githubusercontent.com/u/226598?v=4"

```

```

website_url = "https://teststatus.page/"
support_url = "mailto:help@teststatus.page"
custom_html = ""

```

[metrics]

```

poll_interval = 60
poll_retry = 2

poll_http_status_healthy_above = 200
poll_http_status_healthy_below = 400

```

```

poll_delay_dead = 30
poll_delay_sick = 10

```

```

push_delay_dead = 20

```

```

push_system_cpu_sick_above = 0.90
push_system_ram_sick_above = 0.90

```

```

script_interval = 300

```

```

local_delay_dead = 40

```

[notify]

```

startup_notification = true
reminder_interval = 300

```

[notify.webhook]

```

hook_url = "https://webhook.site/4406e2a4-13cd-4c99-975c-d3456a148b26"

```

[probe]

[[probe.service]]

```

id = "ping"
label = "PING"

```

[[probe.service.node]]

```
