Figure 7: Output of 'single'

first running thread. You can do this using the following piece of code, as shown in Figure 7.

```
#include <omp.h>
#define _GNU_SOURCE
#include <stdio.h>
#include <sched.h>
int main()
{
#pragma omp parallel {
```

```
printf("Hello world!!\n");
#pragma omp single

printf("%d\n", omp_get_num_threads());
}
}
```

We have discussed the important features of OpenMP here. You can take this as the base of your parallel programming journey to explore more in this space. Parallel programming gets more and more interesting as you delve deeper and understand it better. **END!**
