management cycle is minimised, ensuring development teams focus on more important tasks. This leads to better productivity and happier people.

The CI/CD pipeline

A CI/CD pipeline is a series of automated steps that code must go through — from development to deployment — in a production environment. It usually includes the steps of application lifecycle management shown in Figure 3.

Figure 4 shows the key tools used in CI/CD implementation.

Implementing CI/CD

Implementing CI/CD in the organization, business units, or project is a difficult task. It requires a cultural shift towards automation and collaboration in an effective way by
