

Registration fees	US\$ 70.50
Prerequisites	Basic terminal skills; Basic understanding of on-premises and cloud architecture
Questions and format	Multiple choice
Duration	60 minutes
Medium of delivery	Online proctored
Open book	No
Exam content and objectives	• Understand Infrastructure as Code (IaC) concepts • Understand Terraform's purpose (vs other IaC) • Understand Terraform basics • Use the Terraform CLI (outside of core workflow) • Interact with Terraform modules • Navigate Terraform workflow • Implement and maintain state • Read, generate, and modify configuration • Understand Terraform cloud and enterprise capabilities
Good reference books	Study Guide - Terraform Associate Certification, https://learn.hashicorp.com/tutorials/terraform/associate-study ; Exam Review - Terraform Associate Certification, https://learn.hashicorp.com/tutorials/terraform/associate-review
Sample questions	https://learn.hashicorp.com/tutorials/terraform/associate-questions

Certified Kubernetes Administrator (CKA)

The Certified Kubernetes Administrator (CKA) certificate holder can efficiently manage Kubernetes environments. The exam is more performance related.

Registration fees	US\$ 300 and includes one free retake
Questions and format	Performance based items (problems) to be solved in a command line
Duration	120 minutes
Passing score	66 per cent or above
Medium of delivery	Proctored remotely via streaming audio, video, and screen sharing feeds
Open book	Documents installed by the distribution (i.e., <code>/usr/share</code> and its subdirectories); Access allowed for https://kubernetes.io/docs/ , https://github.com/kubernetes/ , https://kubernetes.io/blog/ and their subdomains. This includes all available language translations of these pages (e.g., https://kubernetes.io/zh/docs/).
Exam content and objectives	• Cluster architecture, installation and configuration • Workloads and scheduling • Services and networking • Storage • Troubleshooting
Benefits	Certified K8s administrators can do basic installation as well as configuring and managing production-grade Kubernetes clusters. They will have an understanding of key concepts such as Kubernetes networking, storage, security, maintenance, logging and monitoring, application life cycle, troubleshooting, API object primitives, and the ability to establish basic use cases for end users.
