

Registration fees	US\$ 300 and includes one free retake
Questions and format	Performance based problems to be solved in a command line
Duration	120 minutes
Passing score	66 per cent
Medium of delivery	Proctored remotely via streaming audio, video, and screen sharing feeds
Open book	Documents installed by the distribution (i.e., <code>/usr/share</code> and its subdirectories); Access allowed for https://kubernetes.io/docs/ , https://github.com/kubernetes/ , https://kubernetes.io/blog/ and their subdomains. This includes all available language translations of these pages (e.g., https://kubernetes.io/zh/docs/).
Exam content and objectives	• Core concepts • Configuration • Multi-container pods • Observability • Pod design • Services and networking • State persistence

Benefits

The K8 application developer can design, build, configure and expose cloud native applications for Kubernetes. A CKAD certificate holder can define application resources and use core primitives to build, monitor, and troubleshoot scalable applications and tools in Kubernetes. The exam assumes knowledge of, but does not test for, container runtimes and microservices architecture. A successful candidate will be comfortable using:

- An OCI-compliant container runtime, such as Docker or rkt
- Cloud native application concepts and architectures
- A programming language, such as Python, Node.js, Go, or Java

Certified Kubernetes Administrator (CKA)

The Certified Kubernetes Administrator (CKA) program was created by the Cloud Native Computing Foundation (CNCF), in collaboration with The Linux Foundation, to help develop the Kubernetes ecosystem.

As one of the highest velocity open source projects, Kubernetes use is exploding. The Cloud Native Computing Foundation is committed to growing the community of Kubernetes Administrators, thereby allowing continued growth across the broad set of companies and organizations that are using Kubernetes.
