Table 1: Free and open source platforms for Web application development

the following:

- High performance lightweight Web applications
- Blockchain programming
- Cryptocurrency development
- Cybersecurity and forensic applications
- Cloud and grid computing
- Artificial intelligence

- Data science and analytics patterns
- Machine learning and deep learning
- Natural language processing

Python based libraries and packages for Web application development

Python is enriched with numerous frameworks and libraries for

developing different applications including Web applications. These frameworks are equipped with the latest Web services and functionalities including AJAX, assorted database connections, CURL, security mechanisms, cryptography, dynamic file handling, text analytics, regular expressions, and so on.

The frameworks for Web application development using Python are:

- Bottle
- CherryPy
- CubicWeb
- Dash
- Django
- Django-hotsauce
- Falcon
- FastAPI
- Flask
- Giotto
- Grok
- Hug
- Name
- Pylons
- Pyramid
- Quart
- Reahl
- TurboGears
- Websauna
- Zope
- aiohttp
- bName
- web2py
- wheezy.web

Contents

[Welcome to Flask](#)

- [User's Guide](#)
- [API Reference](#)
- [Additional Notes](#)

Welcome to Flask's documentation. Get started with [Installation](#) and then get an overview with the [Quickstart](#). There is also a more detailed [Tutorial](#) that shows how to create a small but complete application with Flask. Common patterns are described in the [Patterns for Flask](#) section. The rest of the docs describe each component of Flask in detail, with a full reference in the [API](#) section.
