shown in Figure 2.

Developing a mobile app using Xamarin

To develop a mobile app using Xamarin, first start a new instance of Visual Studio. This can be done using *File->New->Project*. We have created a new project with 'first App' as its name, as shown in Figure 3.

After successful configuration of the project name, the *Xamarin.form* home page will open, as shown in Figure 4. This will be used to start the process of building your mobile application.

Once the Xamarin platform is ready, a mobile application can be developed using the following two sub-steps: i)
