

Step 2: Sampler

- Right click on *GoogleHomePageTestSearch* -> *Add* -> *Sampler* -> *HTTP Request*.
- Let's rename again. Update the name to *GoogleHomePageTestSearchHTTPRequest*.
- Update the parameters given below:
 - Server name of IP: *www.google.com*
 - Port number: *None* [optional]
 - Protocol (http): *HTTP* / *HTTPS* [optional]
 - Method: *GET*
 - Path: */search*
 - Parameters:
 - Click *Add*
 - Name: *q*
 - Value: *JMeter*
- For POST method with JSON input:
 - Under 'Body Data' give the JSON format input.
 - If needed, you can add header details under 'HTTP Header Manager' and authorisation under 'HTTP Authorisation Manager'. Both are under *GoogleHomePageTestSearch* -> *Add* -> *Config Element*.

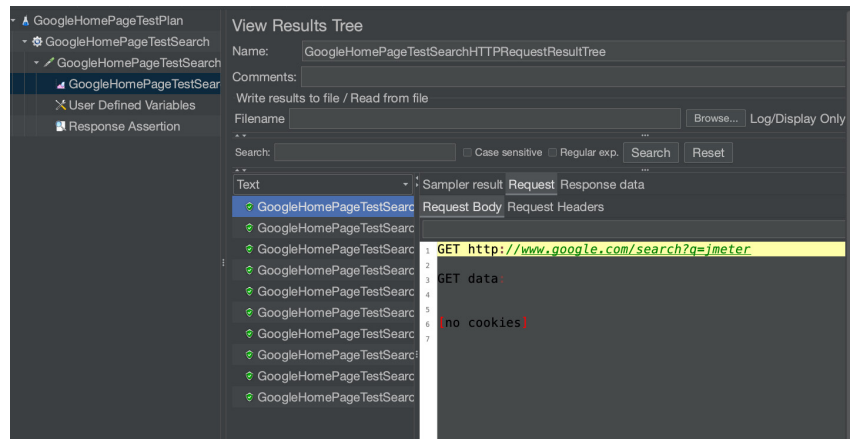

Figure 5: Result page after execution of the sampler

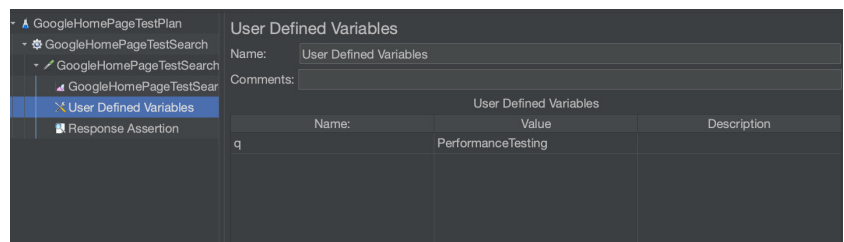

Figure 6: User defined variables page

Step 3: Listener

- Right click on *GoogleHomePageTestSearchHTTPRequest* -> *Add* -> *Listener* -> *View Results Tree*.
- Rename to *GoogleHomePageTestSearchHTTPRequestResultTree*.
- Click on *Run* -> *Green Button*.
- View the results in *Sampler result*, *Response data* and *Request*.
- Different types of charts are available for crisp results. The link is: <https://www.edureka.co/blog/load-testing-using-jmeter/>.

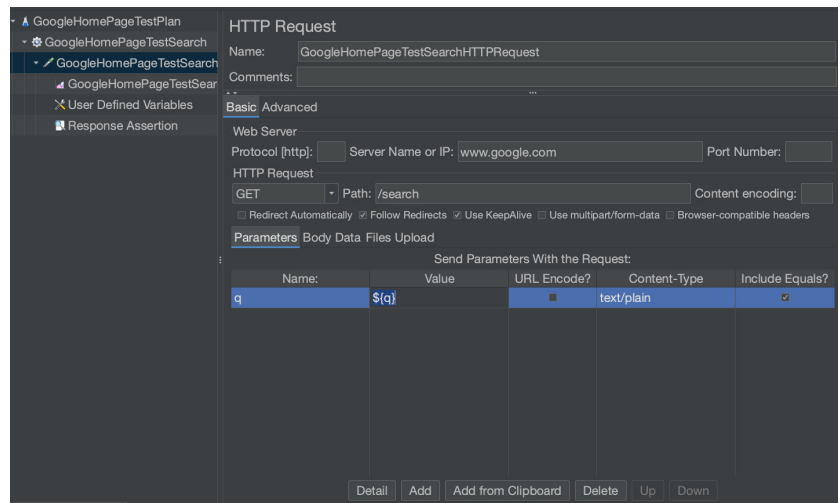

Figure 7: Redefine value to use the user defined variable

Step 4: Configuration [optional]

- Right click on *GoogleHomePageTestSearchHTTPRequest* -> *Add* -> *Config Element* -> *User Defined*.
- Set up the variables.
- Use the defined variable by enclosing it in `${<variable>}`.
- Now check that 'q' is substituted

with the defined variable and *HTTP Request* is also holding the 'q' value.

- The same format can be used while doing data driven testing, wherein you may want to induce dynamic values to the service. We need to configure the CSV data set *Config* under *Config Element*.

Step 5: Assertions

- The response assertion control panel lets you pattern strings to be compared against various fields of the request or response.
- Right click on *GoogleHomePageTestSearchHTTPRequest* -> *Add* -> *Assertions* -> *Response Assertion*
